FUND SUMMARY – DAY HAGAN/NED DAVIS RESEARCH SMART SECTOR INTERNATIONAL ETF

Investment Objective: The Fund’s investment objective is to seek total return, consisting of income and capital appreciation.

Fees and Expenses: This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example below.**

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee ⁽¹⁾	0.68%
Distribution and/or Service Fee (12b-1) Fees	0.00%
Other Expenses ⁽¹⁾⁽²⁾	0.00%
Acquired Fund Fees and Expenses ⁽²⁾⁽³⁾	0.11%
Total Annual Operating Expenses⁽²⁾	0.79%

⁽¹⁾ The management fee is structured as a “unified fee,” out of which the Fund’s adviser pays all routine expenses of the Fund, except for the Fund’s management fee; payments under any 12b-1 plan; taxes; brokerage commissions and trading costs; interest (including borrowing costs and overdraft charges); short sale dividends and interest expenses; acquired fund fees and expenses; and non-routine or extraordinary expenses of the Fund (such as litigation or reorganizational costs), each of which is paid by the Fund.

⁽²⁾ Estimated for the current fiscal year.

⁽³⁾ Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies. The Total Annual Fund Operating expenses in this fee table will not correlate to the expense ratio in the Fund’s Financial Highlights because the financial statements include only the direct operating expenses incurred by the Fund, not the indirect costs of investing in other investment companies.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem or hold all of your shares at the end of those periods. This Example does not reflect the effect of brokerage commissions or other transaction costs you pay in connection with the purchase or sale of Fund shares. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year
\$81

3 Years
\$252

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. Because the Fund has not commenced operations as of the date of this prospectus, the portfolio turnover rate for the last fiscal year is not available. In the future, the portfolio turnover rate for the fiscal period from July 1, 2022 (commencement of operations) to April 30, 2023, will be provided here.

Principal Investment Strategy

The Fund’s investment advisor, Day Hagan Asset Management (the “Advisor”), actively manages the Fund’s portfolio using proprietary investment models co-developed with Ned Davis Research (“NDR”). The Fund is considered a “fund of funds” that, under normal market conditions, seeks to achieve its investment objective by principally investing in unaffiliated international equity exchange traded funds (“ETFs”). The Fund will attempt to

exceed returns of the MSCI ACWI ex USA Index (the “Index”) by overweighting and underweighting its exposure to geographic locations relative to the Index and may also invest in geographic regions not represented in the Index. The Fund may reduce its overall exposure to ETFs from time to time as determined by its risk management model, as discussed further below. The Index is a free float-adjusted market capitalization weighted index designed to measure the combined equity market performance of developed and emerging markets countries, excluding the U.S. As of May 31, 2022, the Index consisted of securities of 22 developed countries (excluding the US) and 25 emerging markets countries.

Under normal market conditions, the Fund will invest (indirectly through ETFs) primarily in companies located in multiple countries outside the United States. The Fund utilizes NDR’s region-specific models and rankings to determine its target allocation to each country and regional location. The models and rankings combine region-specific indicators to form a composite for each location. The models and rankings are designed to evaluate fundamental, technical, economic, and behavioral indicators for each region, such as a region’s GDP growth, inflation levels, money supply, equity valuations, price-to-earnings multiples, analyst’s earnings expectations, market trends, and overall investor sentiment. The indicators for each region focus on risk/reward characteristics of each region with the goal of investing in the regions that have the highest probability of maximizing total return. By combining multiple and diverse indicators, the composite models seek to objectively assess the weight of the evidence and generate geographic allocation recommendations. The Fund’s allocation to a particular geographic location may at times be greater than 25%. Conversely, the Fund’s allocation to a particular geographic location may be reduced to 0% if the region’s model composite is at low levels.

The Fund will invest in ETFs that invest primarily in specific geographical locations. Accordingly, the Fund will deem the relevant holdings of such ETFs to be tied to the specific geographical locations in which the ETFs invest. The criteria for determining if an ETF’s investments are tied to a particular country or region may differ across ETF providers. Additional information on such criteria can be found in the underlying ETF’s registration statement. A list of the underlying ETFs and their weightings at the end of most recently completed fiscal year will be included in the Fund’s annual report.

The Fund’s risk management model, the NDR Catastrophic Stop Model, defines the Fund’s overall target equity allocation. The model reading represents the net percentage of indicators that are bullish; that is, the model evaluates the indicators to seek to identify regions with the highest probability of rising equity markets, while also measuring the potential risk level of factors the equity markets face.

Under normal market conditions, the Fund intends to invest predominantly in international equity ETFs but will reduce its exposure by as much as 50% of its assets during times that the model deems the international equity markets to have a low reward-to-risk ratio from a historical perspective. During these times, the Fund may hold up to 50% of its assets in cash and cash equivalents, including U.S. Treasury securities and money market funds, or utilize derivative securities designed to effectively reduce, or hedge, the Fund’s overall equity exposure. The Fund may purchase index put options and sell index futures contracts to reduce the overall equity exposure of the Fund, and are not intended to achieve a net short position. The decision to purchase or sell derivative securities will be based on the cost and market liquidity of the derivative being used to reduce exposure. The Fund will increase its equity investments when the investment models return to levels indicating that major risks have potentially subsided.

The Fund’s portfolio is rebalanced monthly, although the Advisor may engage in intra-month trades if the models show substantial changes. The Fund may actively trade its portfolio securities during times of high market volatility.

The Fund is classified as “non-diversified” for purposes of the Investment Company Act of 1940 (the “1940 Act”), which means a relatively high percentage of the Fund’s assets may be invested in the securities of a limited number of issuers.

Principal Investment Risks

As with any ETF, there is no guarantee that the Fund will achieve its objective. Investment markets are unpredictable and there will be certain market conditions where the Fund will not meet its investment objective and will lose money. The Fund's net asset value, market price and returns will vary and you could lose money on your investment in the Fund and those losses could be significant. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

The following summarizes the principal risks of investing in the Fund. These risks could adversely affect the net asset value, market price, total return and the value of the Fund and your investment. These risks affect the Fund directly as well as through the ETFs in which it invests.

Active Trading Risk. The Fund may trade securities actively, which could increase its transaction costs (thereby lowering its performance) and could increase the amount of taxes you owe by generating short-term gains, which may be taxed at a higher rate. Under certain market conditions, the Fund's turnover may be very high and considerably higher than that of other funds.

Authorized Participant Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. An "Authorized Participant" is a participant in the Continuous Net Settlement System of the National Securities Clearing Corporation or the Depository Trust Company ("DTC") and that has executed a Participant Agreement with the Fund's distributor ("Distributor"). To the extent these Authorized Participants exit the business or are unable to process creation and/or redemption orders and no other Authorized Participant is able to step forward to process creation and/or redemption orders, in either of these cases, shares of the Fund may trade like closed-end fund shares at a discount to NAV and possibly face delisting.

Cash and Cash Equivalents Risk. At times, the Fund may have significant investments in cash or cash equivalents. When a substantial portion of a portfolio is held in cash or cash equivalents, there is the risk that the value of the cash account, including interest, will not keep pace with inflation, thus reducing purchasing power over time. Additionally, in rising markets, holding cash or cash equivalents may adversely affect the Fund's performance and the Fund may not achieve its investment objective.

Greater China Investment Risk. Investments in companies located or operating in Greater China (normally considered to be the geographical area that includes mainland China, Hong Kong, Macau and Taiwan) involve risks and considerations not typically associated with investments in the U.S. and other Western nations, such as greater government control over the economy; political, legal and regulatory uncertainty; nationalization, expropriation, or confiscation of property; difficulty in obtaining information necessary for investigations into and/or litigation against Chinese companies, as well as in obtaining and/or enforcing judgments; limited legal remedies for shareholders; alteration or discontinuation of economic reforms; military conflicts, either internal or with other countries; inflation, currency fluctuations and fluctuations in inflation and interest rates that may have negative effects on the economy and securities markets of Greater China.

Derivatives Risk. The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying reference asset. Derivatives can also create leverage risk because they do not require payment up front equal to the economic exposure created by holding a position in the derivative. As a result, an adverse change in the value of the underlying asset could result in the Fund sustaining a loss that is substantially greater than the amount invested in the derivative or the anticipated value of the underlying asset, which may make the Fund's returns more volatile and increase the risk of loss. Derivative instruments may be less liquid than more traditional investments and the Fund may be unable to sell or close out its derivative positions at a desirable time or price. This

risk may be more acute under adverse market conditions, during which the Fund may be most in need of liquidating its derivative positions. Derivatives may also be less tax efficient and subject to changing government regulation that could impact the Fund's ability to use certain derivatives or their cost. When a derivative is used for hedging, the change in value of the derivative may also not correlate specifically with the risk of the underlying asset being hedged. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Derivatives strategies may not always be successful, and their successful use will depend on the portfolio managers' ability to accurately forecast movements in the market relating to the underlying asset.

- *Futures Risk.* Investments in futures contracts involve leverage, which means a small percentage of assets invested in futures can have a disproportionately large impact on the Fund. This risk could cause the Fund to lose more than the principal amount invested. In addition, futures contracts may become mispriced or improperly valued relative to the Advisor's expectations and may not produce the desired investment results. Additionally, changes in the value of futures contracts may not track or correlate perfectly with the underlying reference asset because of temporary, or even long-term, supply and demand imbalances and because futures do not pay dividends.
- *Hedging Risk.* Hedging is a strategy in which the Fund uses options or futures to offset the risks associated with other Fund holdings. There can be no assurance that the Fund's hedging strategy will reduce risk or that hedging transactions will be either available or cost effective.
- *Options Market Risk.* Markets for options may not always operate on a fair and orderly basis. At times, prices for options may not represent fair market value and prices may be subject to manipulation, which may be extreme under some circumstances. The dysfunction and manipulation of volatility and options markets may make it difficult for the Fund to effectively implement its investment strategy and achieve its objectives and could potentially lead to significant losses.
- *Options Risk.* There are risks associated with the Fund's use of options. As the buyer of a put option, the Fund risks losing the entire premium invested in the option if the underlying reference instrument does not fall below the strike price, which means the option will expire worthless.

Additionally, purchased options may decline in value due to changes in the price of the underlying reference instrument, passage of time and changes in volatility. Generally, options may not be an effective hedge because they may have imperfect correlation to the value of the Fund's portfolio securities. Further, the underlying reference instrument on which the option is based may have imperfect correlation to the value of the Fund's portfolio securities. Option premiums are treated as short-term capital gains and when distributed to shareholders, are usually taxable as ordinary income, which may have a higher tax rate than long-term capital gains for shareholders holding Fund shares in a taxable account. Options are also subject to leverage and volatility risk, liquidity risk, and tracking risk.

Emerging Market Risk. Emerging market countries may have relatively unstable governments, weaker economies, and less-developed legal systems with fewer security holder rights. Securities law and the enforcement of systems of taxation in many emerging market countries may change quickly and unpredictably, and the ability to bring and enforce actions, or to obtain information needed to pursue or enforce such actions, may be limited. Companies in emerging market countries generally may be subject to less stringent regulatory, disclosure, financial reporting, accounting, auditing and recordkeeping standards than companies in more developed countries. As a result, information, including financial information, about such companies may be less available and reliable, which can impede the Fund's ability to evaluate such companies. Emerging markets usually are subject to greater market

volatility, political, social and economic instability, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than are more developed markets. Emerging market economies may be based on only a few industries and security issuers may be more susceptible to economic weakness and more likely to default. Emerging market securities also tend to be less liquid and the prices of such securities tend to be more volatile than the securities of issuers located in developed markets. Investments in emerging markets securities may be subject to additional transaction costs, delays in settlement procedures, unexpected market closures, and lack of timely information.

Equity Securities Risk. The net asset value and market price of the Fund will fluctuate based on changes in the value of the equity securities held by the Fund. Equity prices can fall rapidly in response to developments affecting a specific company or industry, or to changing economic, political or market conditions.

ETF Structure Risks. The Fund, and the ETFs the Fund invests in, are structured as ETFs and as a result are subject to special risks, including:

- *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at NAV only in large blocks known as “Creation Units.” You may incur brokerage costs purchasing enough Shares to constitute a Creation Unit. Fund shares are typically bought and sold in the secondary market and investors typically pay brokerage commissions or other charges on these transactions.
- *Trading Issues.* Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund’s shares may not be developed or maintained. If the Fund’s shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund’s shares.
- *Market Price Variance Risk.* The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a “bid-ask spread” charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly. This means that Shares may trade at a discount to NAV.
 - In times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which may result in a significantly diminished trading market for the Fund’s shares and can lead to differences between the market value of Fund shares and the Fund’s net asset value, and wider bid-ask spreads.
 - The market price for the Fund’s shares may deviate from the Fund’s net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund’s net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price.
 - When all or a portion of an ETF’s underlying securities trade in a market that is closed when the market for the Fund’s shares is open, there may be changes from the last quote of the closed market and the quote from the Fund’s domestic trading

day, which could lead to differences between the market value of the Fund's shares and the Fund's net asset value.

- In stressed market conditions, the market for the Fund's shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Fund's shares may, in turn, lead to differences between the market value of the Fund's shares and the Fund's net asset value. Because bid-ask spreads vary over time based on trading volume and market liquidity (including for the underlying securities held by the Fund), spreads may widen if the Fund's shares have little trading volume and market liquidity. Conversely, the bid-ask spreads will generally be narrower if the Fund's shares have more trading volume and market liquidity.

Foreign Investment Risk. Investments in foreign securities tend to be more volatile and less liquid than investments in U.S. securities because, among other things, they involve risks relating to political, social and economic developments abroad, including economic sanctions, as well as risks resulting from differences between the regulations and reporting standards and practices to which U.S. and foreign issuers are subject. Investing in foreign securities includes trading related risks (e.g., government supervision and regulation of foreign securities and currency markets, trading systems and brokers maybe less than in the U.S., and foreign securities may be subject to foreign governmental restrictions such as exchange controls). All of the risks of investing in foreign securities are typically increased by investing in emerging market countries. Securities denominated in foreign currencies may be adversely affected by changes in currency rates and by substantial currency conversion costs. The departure of the United Kingdom and the potential departure of additional countries from the European Union may have significant political and financial consequences on global markets. Uncertainty relating to the withdrawal procedures and timeline may have adverse effects on valuations and the renegotiation of current trade agreements, as well as an increase in financial regulation in such markets.

Geographic Concentration Risk. The Fund may be particularly susceptible to economic, political, regulatory or other events or conditions affecting countries within the specific geographic regions in which the Fund invests. Currency devaluations could occur in countries that have not yet experienced currency devaluation to date, or could continue to occur in countries that have already experienced such devaluations. As a result, the Fund's net asset value or market price may be more volatile than a more geographically diversified fund.

Investment Style Risk. The type of securities in which the Fund focuses may underperform other assets or the overall market.

Management Risk. The Advisor's reliance on its sector allocation and risk management strategies and related judgments about the value and potential appreciation of securities in which the Fund invests may prove to be incorrect. The Advisor may not successfully implement the Fund's investment strategies and, as a result, the Fund may not meet its investment objective and/or underperform other investment vehicles with similar investment objectives and strategies.

Market Risk. The value of securities in the Fund's portfolio will fluctuate and, as a result, the Fund's NAV or market price per share may decline suddenly or over a sustained period of time. Factors such as domestic and foreign economic growth rates and market conditions, interest rate levels and political events may adversely affect the securities markets. The impacts of the novel coronavirus known as COVID-19 on the global economy has resulted, and may continue to result, in prolonged periods of heightened volatility with respect to inflation and the value of global currencies, including the U.S. dollar, which may adversely affect the performance of the Fund. Further, the Fund may face challenges with respect to its day-to-day operations if key personnel of the Advisor or other service providers are unavailable due to quarantines and restrictions on travel. As a result, the risk environment remains

elevated. The Advisor will monitor developments and seek to manage the Fund in a manner consistent with achieving the Fund's investment objective, but there can be no assurance that it will be successful in doing so.

Model and Data Risk. Like all quantitative analysis, the investment models utilized by the Advisor carry the risk that the ranking system, valuation results and predictions might be based on one or more incorrect assumptions, insufficient historical data, inadequate design, or may not be suitable for the purpose intended. In addition, models may not perform as intended for many reasons including errors, omissions, imperfections or malfunctions. Because the use of models is usually constructed based on data supplied by third parties, the success of the Advisor's use of such models is dependent on the accuracy and reliability of the supplied data. Historical data inputs may be subject to revision or corrections, which may diminish data reliability and quality of predictive results. Changing and unforeseen market dynamics could also lead to a decrease in the short-term or long-term effectiveness of a model. Models may lose their predictive validity and incorrectly forecast future market behavior and asset prices, leading to potential losses. No assurance can be given that a model will be successful under all or any market conditions. The accuracy, timeliness, and sufficiency of information used to construct the models used to manage the Fund's portfolio, particularly information relating to non-U.S. and emerging markets issuers, are susceptible to risks associated with foreign and emerging markets investments, as described under "Foreign Investment Risk" and "Emerging Market Risk" above.

Non-Diversification Risk. The Fund is classified as a "non-diversified" fund under the 1940 Act. Accordingly, the Fund may invest a greater portion of its assets in the securities of a single issuer than if it were a "diversified" fund. To the extent that the Fund invests a higher percentage of its assets in the securities of a single issuer, the Fund is subject to a higher degree of risk associated with and developments affecting that issuer than a fund that invests more widely.

New Fund Risk. The Fund is a new fund with no history of operations as an ETF for investors to evaluate. If the Fund is unable to achieve an economic size, expenses will be higher than expected and the Fund might close, which could produce adverse tax consequences for shareholders.

Underlying Fund Risk. The ETFs and money market funds ("Underlying Funds") in which the Fund invests are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in the Underlying Funds and may be higher than other funds that invest directly in stocks and bonds. Each of the Underlying Funds is subject to its own specific risks.

U.S. Government Obligations Risk. U.S. Treasury obligations are backed by the "full faith and credit" of the U.S. government and generally have negligible credit risk. However, due to fluctuations in interest rates, the market value of such securities may vary during the period shareholders own shares of the Fund. Securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. government. The Fund may be subject to such risk to the extent it invests in securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises.

Performance:

Because the Fund is a new fund, it has no performance history. In the future, performance information will be presented in this section of this Prospectus. Updated performance information will be available at www.dhffunds.com or by calling 1-800-594-7930.

Advisor: Donald L. Hagan, LLC, doing business as Day Hagan Asset Management, is the Fund's investment advisor.

Portfolio Managers: Donald Hagan and Arthur Day, each Managing Members of the Advisor, and Regan Teague, Portfolio Manager of the Advisor, serve as the Fund’s Portfolio Managers and are primarily responsible for the day-to-day management of the Fund. Mr. Hagan is the Lead Portfolio Manager of the Fund. Messrs. Hagan, Day and Teague have served the Fund in this capacity since it commenced operations in July 2022.

Purchase and Sale of Fund Shares: You may purchase and sell individual Fund shares at market prices on the NYSE Arca, Inc. (the “Exchange”) through your financial institution on each day that the Exchange is open for business (“Business Day”). Because individual Fund shares trade at market prices rather than at their NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount). You may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the “bid-ask spread”).

Recent information, including information on the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, will be available online at www.dhfunds.com.

Tax Information: The Fund’s distributions are taxable as ordinary income or capital gains, except when your investment is through a tax-advantaged account such as an Individual Retirement Account (IRA) or you are a tax-exempt investor. Distributions from a tax-advantaged account may be taxed as ordinary income when withdrawn from such account.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUND'S PRINCIPAL INVESTMENT STRATEGIES AND RELATED RISKS

INVESTMENT OBJECTIVE

The Fund's investment objective is to seek total return, consisting of income and capital appreciation. The investment objective of the Fund is non-fundamental and may be changed by the Board of Trustees without shareholder approval. If the Board decides to change the Fund's investment objective, shareholders will be given 60 days' advance notice.

PRINCIPAL INVESTMENT STRATEGIES

The Fund's investment advisor, Day Hagan Asset Management (the "Advisor"), actively manages the Fund's portfolio using proprietary investment models co-developed with Ned Davis Research ("NDR"). The Fund is considered a "fund of funds" that, under normal market conditions, seeks to achieve its investment objective by principally investing in unaffiliated international equity exchange traded funds ("ETFs"). The Fund will attempt to exceed returns of the MSCI ACWI ex USA Index (the "Index") by overweighting and underweighting its exposure to geographic locations relative to the Index and may also invest in geographic regions not represented in the Index. The Fund may reduce its overall exposure to ETFs from time to time as determined by its risk management model, as discussed further below. The Index is a free float-adjusted market capitalization weighted index designed to measure the combined equity market performance of developed and emerging markets countries, excluding the U.S. As of May 31, 2022, the Index consisted of securities from the following countries or regions: Argentina, Australia, Austria, Belgium, Brazil, Canada, Chile, China, Colombia, Czechia, Denmark, Egypt, Finland, France, Germany, Greece, Hong Kong, Hungary, India, Indonesia, Ireland, Israel, Italy, Japan, Kuwait, Malaysia, Mexico, the Netherlands, New Zealand, Norway, Pakistan, Peru, the Philippines, Poland, Portugal, Qatar, Russia, Saudi Arabia, Singapore, South Africa, South Korea, Spain, Sweden, Switzerland, Taiwan, Thailand, Turkey, the United Arab Emirates and the United Kingdom.

Under normal market conditions, the Fund will invest (indirectly through ETFs) primarily in companies located in multiple countries outside the United States. The Fund utilizes NDR's region-specific models and rankings to determine its target allocation to each country and regional location. The models and rankings combine region-specific indicators to form a composite for each location. The models and rankings are designed to evaluate fundamental, technical, economic, and behavioral indicators for each region, such as a region's GDP growth, inflation levels, money supply, equity valuations, price-to-earnings multiples, analyst's earnings expectations, market trends, and overall investor sentiment. The indicators for each region focus on risk/reward characteristics of each region with the goal of investing in the regions that have the highest probability of maximizing total return. By combining multiple and diverse indicators, the composite models seek to objectively assess the weight of the evidence and generate geographic allocation recommendations. The Fund's allocation to a particular geographic location may at times be greater than 25%. Conversely, the Fund's allocation to a particular geographic location may be reduced to 0% if the region's model composite is at low levels.

The Fund will invest in ETFs that invest primarily in specific geographical locations. Accordingly, the Fund will deem the relevant holdings of such ETFs to be tied to the specific geographical locations in which the ETFs invest. The criteria for determining if an ETF's investments are tied to a particular country or region may differ across ETF providers. Additional information on such criteria can be found in the underlying ETF's registration statement. A list of the underlying ETFs and their weightings at the end of most recently completed fiscal year will be included in the Fund's annual report.

The Fund's risk management model, the NDR Catastrophic Stop Model, defines the Fund's overall target equity allocation. The model reading represents the net percentage of indicators that are bullish; that is, the model evaluates

the indicators to seek to identify regions with the highest probability of rising equity markets, while also measuring the potential risk level of factors the equity markets face.

Under normal market conditions, the Fund intends to invest predominantly in international equity ETFs but will reduce its exposure by as much as 50% of its assets during times that the model deems the international equity markets to have a low reward-to-risk ratio from a historical perspective. The risk management model is designed to only reduce exposure when a large, diverse set of long-term market indicators conclusively and decisively turn negative. Short-term market declines, such as a “flash crash,” may not be avoided if the risk management model remains in positive territory. During these times, the Fund may hold up to 50% of its assets in cash and cash equivalents, including U.S. Treasury securities and money market funds, or utilize derivative securities designed to effectively reduce, or hedge, the Fund’s overall equity exposure. The Fund may purchase index put options and sell index futures contracts to reduce the overall equity exposure of the Fund, and are not intended to achieve a net short position. The decision to purchase or sell derivative securities will be based on the cost and market liquidity of the derivative being used to reduce exposure. The Fund will increase its equity investments when the investment models return to levels indicating that major risks have potentially subsided. Importantly, the strategy is not anchored to a single indicator series such as momentum, relative strength, or valuation. Therefore, if the model’s reading shows that a relatively greater number of indicators supporting a regional market’s rise are in place, then the strategy will be allocated accordingly. Conversely, if the regional market has fewer positive indicators, then that sector will be underweighted.

The Fund’s portfolio is rebalanced monthly, although the Advisor may engage in intra-month trades if the models show substantial changes. The Fund may actively trade its portfolio securities during times of high market volatility.

The Fund is classified as “non-diversified” for purposes of the Investment Company Act of 1940 (the “1940 Act”), which means a relatively high percentage of the Fund’s assets may be invested in the securities of a limited number of issuers.

PRINCIPAL INVESTMENT RISKS

All ETFs carry a certain amount of risk. As with any ETF, there is no guarantee that the Fund will achieve its objective. Investment markets are unpredictable and there will be certain market conditions where the Fund will not meet its investment objective and will lose money. The Fund’s net asset value, market price and returns will vary and you could lose money on your investment in the Fund and those losses could be significant. An investment in the Fund is not a complete investment program. These risks affect the Fund directly as well as through the Underlying Funds in which it invests.

The following summarizes the principal risks of the Fund. These risks could adversely affect the net asset value, market price, total return and the value of the Fund and your investment. The risk descriptions below provide a more detailed explanation of the principal investment risks that correspond to the risks described in the Fund’s Fund Summary section of the Prospectus. These risks affect the Fund directly as well as through the Underlying Funds in which it invests.

Active Trading Risk. Active trading will cause the Fund to have an increased portfolio turnover rate, which is likely to generate shorter-term gains for its shareholders, which are taxed at a higher rate than longer-term gains. Actively trading portfolio securities increases the Fund’s trading costs and may have an adverse impact on the Fund’s performance.

Authorized Participant Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. An “Authorized Participant” is a participant in the Continuous Net Settlement System of the National Securities Clearing Corporation or the Depository Trust Company (“DTC”) and that has executed a Participant Agreement with the Fund’s distributor (“Distributor”). To the extent these Authorized Participants exit the business

or are unable to process creation and/or redemption orders and no other Authorized Participant is able to step forward to process creation and/or redemption orders, in either of these cases, shares of the Fund may trade like closed-end fund shares at a discount to NAV and possibly face delisting.

Cash and Cash Equivalent Risk. The Fund may have significant investments in cash or cash equivalents. When a substantial portion of a portfolio is held in cash or cash equivalents, there is the risk that the value of the cash account, including interest, will not keep pace with inflation, thus reducing purchasing power over time. Additionally, in rising markets, holding cash or cash equivalents may adversely affect the Fund's performance and the Fund may not achieve its investment objective.

Greater China Investment Risk. Investments in companies located or operating in Greater China (normally considered to be the geographical area that includes mainland China, Hong Kong, Macau and Taiwan) involve risks and considerations not typically associated with investments in the U.S. and other Western nations, such as greater government control over the economy; political, legal and regulatory uncertainty; nationalization, expropriation, or confiscation of property; difficulty in obtaining information necessary for investigations into and/or litigation against Chinese companies, as well as in obtaining and/or enforcing judgments; limited legal remedies for shareholders; alteration or discontinuation of economic reforms; military conflicts, either internal or with other countries; inflation, currency fluctuations and fluctuations in inflation and interest rates that may have negative effects on the economy and securities markets of Greater China; and Greater China's dependency on the economies of other Asian countries, many of which are developing countries. Events in any one country within Greater China may impact the other countries in the region or Greater China as a whole. Export growth continues to be a major driver of China's rapid economic growth. As a result, a reduction in spending on Chinese products and services, the institution of additional tariffs or other trade barriers (or the threat thereof), including as a result of trade tensions between China and the United States, or a downturn in any of the economies of China's key trading partners may have an adverse impact on the Chinese economy. In addition, actions by the U.S. government, such as delisting of certain Chinese companies from U.S. securities exchanges or otherwise restricting their operations in the U.S., may negatively impact the value of such securities held by the Fund. Further, health events, such as the recent coronavirus outbreak, may cause uncertainty and volatility in the Chinese economy, especially in the consumer discretionary (leisure, retail, gaming, tourism), industrials, and commodities sectors. Additionally, the inability of the PCAOB to inspect audit work papers and practices of PCAOB-registered accounting firms in China with respect to their audit work of U.S. reporting companies may impose significant additional risks associated with investments in China.

Derivatives Risk. The Fund may use derivatives including options and futures. The Fund's use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying reference asset. Derivatives may also be less tax efficient and subject to changing government regulation that could impact the Fund's ability to use certain derivatives or their cost. In addition, changes in government regulation of derivative instruments could affect the character, timing and amount of the Fund's taxable income or gains, and may limit or prevent the Fund from using certain types of derivative instruments as a part of its investment strategy, which could make the investment strategy more costly to implement or require the Fund to change its investment strategy. When a derivative is used for hedging, the change in value of the derivative may also not correlate specifically with the risk of the underlying asset being hedged. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, and changes in interest rates, inflation and deflation. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities including:

Futures Risk. The Fund's use of futures involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments and exposes the Fund to the risks associated with derivative instruments described above. These risks include (i) leverage risk (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the futures contract may not correlate perfectly with the underlying index. Investments in futures contracts involve leverage, which means a small percentage of assets invested in futures can have a disproportionately large impact on the Fund. This risk could cause the Fund to lose more than the principal amount invested. In addition, futures contracts may become mispriced or improperly valued relative to the Advisor's expectations and may not produce the desired investment results. Additionally, changes in the value of futures contracts may not track or correlate perfectly with the underlying reference asset because of temporary, or even long-term, supply and demand imbalances. Most U.S. commodity futures exchanges impose daily limits regulating the maximum amount above or below the previous day's settlement price which a futures contract price may fluctuate during a single day. During a single trading day no trades may be executed at prices beyond the daily limit. Once the price of a particular futures contract has increased or decreased to the limit point, it may be difficult, costly or impossible to liquidate a position. It is also possible that an exchange or the Commodity Futures Trading Commission ("CFTC"), which regulates commodity futures exchanges, may suspend trading in a particular contract, order immediate settlement of a contract or order that trading to the liquidation of open positions only.

Hedging Risk. Hedging is a strategy in which the Fund uses a security or derivative to reduce the risks associated with other Fund holdings. There can be no assurance that the Fund's hedging strategy will reduce risk or that hedging transactions will be either available or cost effective.

Leverage and Volatility Risk: Derivative contracts ordinarily have leverage inherent in their terms. The low margin deposits normally required in trading derivatives permit a high degree of leverage. Accordingly, a relatively small price movement may result in an immediate and substantial loss to the Fund. The use of leverage may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations or to meet collateral segregation requirements. The use of leveraged derivatives can magnify the Fund's potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund's share price.

Liquidity Risk: It is possible that particular derivative investments might be difficult to purchase or sell, possibly preventing the Fund from executing positions at an advantageous time or price, or possibly requiring the Fund to dispose of other investments at unfavorable times or prices in order to satisfy its obligations.

Options Market Risk. Markets for options and options on futures may not always operate on a fair and orderly basis. At times, prices for options and options on futures may not represent fair market value and prices may be subject to manipulation, which may be extreme under some circumstances. The dysfunction and manipulation of volatility and options markets may make it difficult for the Fund to effectively implement its investment strategy and achieve its objectives and could potentially lead to significant losses.

Options Risk. There are risks associated with the Fund's options strategy. Generally, options may not be an effective hedge because they may have imperfect correlation to the value of the Fund's portfolio securities. Factors such as differences in supply and demand for certain options may cause their returns to deviate from the Advisor's expectations. Additionally, the underlying reference instrument on which the option is based may have imperfect correlation to the value of the Fund's portfolio securities. As the buyer of a call option, the Fund risks losing the entire premium invested in the option if the underlying reference instrument does not rise above the strike price, which means the option will expire worthless. As the buyer of a put option, the Fund risks losing the entire premium invested in the option if the underlying reference instrument does not fall below the strike price, which means the option will expire worthless. Additionally,

purchased options may decline in value due to changes in the price of the underlying reference instrument, passage of time and changes in volatility. As a seller (writer) of a put option, the Fund will lose money if the value of the underlying reference instrument falls below the strike price. As a seller (writer) of a call option, the Fund will lose money if the value of the underlying reference instrument rises above the strike price. The Fund's losses are potentially large in a written put transaction and potentially unlimited in a written call transaction. Option premiums are treated as short-term capital gains and when distributed to shareholders, are usually taxable as ordinary income, which may have a higher tax rate than long-term capital gains for shareholders holding Fund shares in a taxable account. Because option premiums paid or received by the Fund are small in relation to the market value of the investments underlying the options, buying and selling put and call options can be more speculative than investing directly in securities.

In general, option prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships.

Emerging Market Risk. The Fund may invest in countries with newly organized or less developed securities markets. There are typically greater risks involved in investing in emerging markets securities. Generally, economic structures in these countries are less diverse and mature than those in developed countries and their political systems tend to be less stable. Emerging markets countries may have a higher degree of corruption and fraud than developed market countries, as well as counterparties and financial institutions with less financial sophistication, creditworthiness and/or resources. Emerging market economies may be based on only a few industries, therefore security issuers, including governments, may be more susceptible to economic weakness and more likely to default. Emerging market countries may also have higher rates of inflation and more rapid and extreme fluctuations in inflation rates and greater sensitivity to interest rate changes. Emerging market countries may have relatively unstable governments, weaker economies, and less-developed legal systems with fewer security holder rights. Therefore, laws regarding foreign investment in emerging market securities, securities regulation, title to securities, and shareholder rights may change quickly and unpredictably. Emerging markets countries also may have less developed legal systems allowing for enforcement of private property rights and/or redress for injuries to private property, such as bankruptcy. The ability to bring and enforce actions in emerging market countries, or to obtain information needed to pursue or enforce such actions, may be limited and shareholder claims may be difficult or impossible to pursue. In addition, the taxation systems at the federal, regional and local levels in emerging market countries may be less transparent and inconsistently enforced, and subject to sudden change. Further, companies in emerging market countries generally may be subject to less stringent regulatory, disclosure, financial reporting, accounting, auditing and recordkeeping standards than companies in more developed countries and, as a result, the nature and quality of such information may vary. Information about such companies may be less available and reliable and, therefore, the ability to conduct adequate due diligence in emerging markets may be limited which can impede the Fund's ability to evaluate such companies. In addition, certain emerging market countries have material limitations on Public Company Accounting Oversight Board ("PCAOB") inspection, investigation and enforcement capabilities which hinder the ability to engage in independent oversight or inspection of accounting firms located in or operating in certain emerging markets; therefore, there is no guarantee that the quality of financial reporting or the audits conducted by audit firms of emerging market issuers meet PCAOB standards. The potentially smaller size of emerging markets countries' securities markets and lower trading volumes can make investments relatively illiquid and potentially more volatile than investments in developed countries, and such securities may be subject to abrupt and severe price declines. Due to this relative lack of liquidity, the Fund may have to accept a lower price or may not be able to sell a portfolio security at all. An inability to sell a portfolio position can adversely affect the Fund's value or prevent the Fund from being able to meet cash obligations or take advantage of other investment opportunities. Other risks of investing in emerging markets securities may include additional transaction costs, delays in settlement procedures, unexpected market closures, and lack of timely information.

Equity Securities Risk. Equity securities are susceptible to general stock market fluctuations and to volatile increases and decreases in value. Equity securities may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors affecting securities markets generally, the equity securities of a particular sector, or a particular company. Investor perceptions are based on various and unpredictable factors, including expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction and global or regional political, economic and banking crises.

ETF Structure Risk. The Fund, and the ETFs the Fund invests in, are structured as ETFs and as a result are subject to special risks, including:

- *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at NAV only in large blocks known as “Creation Units.” You may incur brokerage costs purchasing enough Shares to constitute a Creation Unit. Fund shares are typically bought and sold in the secondary market and investors typically pay brokerage commissions or other charges on these transactions.
- *Trading Issues.* Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund’s shares may not be developed or maintained. If the Fund’s shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund’s shares.
- *Market Price Variance Risk.* Individual Shares of the Fund that are listed for trading on the Exchange can be bought and sold in the secondary market at market prices. The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares. There may be times when the market price and the NAV vary significantly and you may pay more than NAV when buying Shares on the secondary market, and you may receive less than NAV when you sell those Shares. The market price of Shares, like the price of any exchange-traded security, includes a “bid-ask spread” charged by the exchange specialists, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that Shares may trade at a discount to NAV and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that you most want to sell your Shares. The Fund’s investment results are measured based upon the daily NAV of the Fund over a period of time. Investors purchasing and selling Shares in the secondary market may not experience investment results consistent with those experienced by those creating and redeeming directly with the Fund.
 - In times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which may result in a significantly diminished trading market for the Fund’s shares and can lead to differences between the market value of Fund shares and the Fund’s net asset value, and wider bid-ask spreads.
 - The market price for the Fund’s shares may deviate from the Fund’s net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund’s net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price.
 - When all or a portion of an ETF’s underlying securities trade in a market that is closed when the market for the Fund’s shares is open, there may be changes from the last quote of the closed market and the quote from the Fund’s trading day, which could lead to differences between the market value of the Fund’s shares and the Fund’s net asset value.

- In stressed market conditions, the market for the Fund's shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Fund's shares may, in turn, lead to differences between the market value of the Fund's shares and the Fund's net asset value. Because bid-ask spreads vary over time based on trading volume and market liquidity (including for the underlying securities held by the Fund), spreads may widen if the Fund's shares have little trading volume and market liquidity. Conversely, the bid-ask spreads will generally be narrower if the Fund's shares have more trading volume and market liquidity.

Foreign Investment Risk. To the extent the Fund invests in foreign securities, the Fund could be subject to greater risks because the Fund's performance may depend on issues other than the performance of a particular company or U.S. market sector. Changes in foreign economies and political climates are more likely to affect the Fund than they would a mutual fund that invests exclusively in U.S. companies. The value of foreign securities is also affected by the value of the local currency relative to the U.S. dollar. There may also be less government supervision of foreign markets, resulting in non-uniform accounting practices and less publicly available information. The values of foreign investments may be affected by changes in exchange control regulations, application of foreign tax laws (including withholding tax), changes in governmental administration or economic or monetary policy (in this country or abroad) or changed circumstances in dealings between nations. In addition, foreign brokerage commissions, custody fees and other costs of investing in foreign securities are generally higher than in the United States. Investments in foreign issuers could be affected by other factors not present in the United States, including expropriation, armed conflict, confiscatory taxation, and potential difficulties in enforcing contractual obligations. As a result, the Fund may be exposed to greater risk and will be more dependent on the Advisor's ability to assess such risk than if the Fund invested solely in more developed countries. The departure of the United Kingdom and the potential departure of additional countries from the European Union may have significant political and financial consequences on global markets. Uncertainty relating to the withdrawal procedures and timeline may have adverse effects on valuations and the renegotiation of current trade agreements, as well as an increase in financial regulation in such markets.

Geographic Concentration Risk. The Fund may be particularly susceptible to economic, political, regulatory or other events or conditions affecting countries within the specific geographic regions in which the Fund invests. Currency devaluations could occur in countries that have not yet experienced currency devaluation to date, or could continue to occur in countries that have already experienced such devaluations. As a result, the Fund's net asset value or market price may be more volatile than a more geographically diversified fund.

Investment Style Risk. The particular type of investments in which the Fund focuses may underperform other asset classes or the overall market. Individual market segments tend to go through cycles of performing better or worse than other types of securities. These periods may last as long as several years. Additionally, a particular market segment could fall out of favor with investors, causing the Fund, when it focuses on that market segment, to underperform those that favor other kinds of securities.

Management Risk. The Advisor may not successfully implement the Fund's investment strategies and, as a result, the Fund may not meet its investment objective and/or underperform other investment vehicles with similar investment objectives and strategies.

Market Risk. Overall market risks may also affect the value of the Fund. The market values of securities or other investments owned by the Fund will go up or down, sometimes rapidly or unpredictably. Factors such as economic growth and market conditions, interest rate levels, exchange rates and political events affect the securities markets. Changes in market conditions and interest rates generally do not have the same impact on all types of securities and instruments. Unexpected local, regional or global events and their aftermath, such as war; acts of terrorism; financial, political or social disruptions; natural, environmental or man-made disasters; the spread of infectious illnesses or other public health issues; recessions and depressions; or other tragedies, catastrophes and events could

have a significant impact on the Fund and its investments and could result in increased premiums or discounts to the Fund's net asset value, and may impair market liquidity, thereby increasing liquidity risk. Such events can cause investor fear and panic, which can adversely affect the economies of many companies, sectors, nations, regions and the market in general, in ways that cannot necessarily be foreseen. The Fund could lose money over short periods due to short-term market movements and over longer periods during more prolonged market downturns. During a general market downturn, multiple asset classes may be negatively affected. In times of severe market disruptions you could lose your entire investment.

An outbreak of infectious respiratory illness caused by a novel coronavirus known as COVID-19 was first detected in China in December 2019 and subsequently spread globally. This coronavirus has resulted in, among other things, travel restrictions, closed international borders, enhanced health screenings at ports of entry and elsewhere, disruption of and delays in healthcare service preparation and delivery, prolonged quarantines, significant disruptions to business operations, market closures, cancellations and restrictions, supply chain disruptions, lower consumer demand, and significant volatility and declines in global financial markets, as well as general concern and uncertainty. The impact of COVID-19 has adversely affected, and other infectious illness outbreaks that may arise in the future could adversely affect, the economies of many nations and the entire global economy, individual issuers and capital markets in ways that cannot necessarily be foreseen. In addition, the impact of infectious illnesses in emerging market countries may be greater due to generally less established healthcare systems. Public health crises caused by the COVID-19 outbreak may exacerbate other pre-existing political, social and economic risks in certain countries or globally.

The impacts of COVID-19 on the global economy has resulted, and may continue to result, in prolonged periods of heightened volatility with respect to inflation, the value of global currencies, including the U.S. dollar, and the value of gold, each of which may adversely affect the performance of the Fund. Further, the Fund may face challenges with respect to its day-to-day operations if key personnel of the Advisor or other service providers are unavailable due to quarantines and restrictions on travel. As a result, the risk environment remains elevated. The Advisor will monitor developments and seek to manage the Fund in a manner consistent with achieving the Fund's investment objective, but there can be no assurance that it will be successful in doing so. The duration of the COVID-19 outbreak and its effects cannot be determined with certainty.

Model and Data Risk. Like all quantitative analysis, the investment models utilized by the Advisor carry the risk that the ranking system, valuation results and predictions might be based on one or more incorrect assumptions, insufficient historical data, inadequate design, or may not be suitable for the purpose intended. In addition, models may not perform as intended for many reasons including errors, omissions, imperfections or malfunctions. Because the use of models are usually constructed based on data supplied by third parties, the success of the Advisor's use of such models is dependent on the accuracy and reliability of the supplied data. Historical data inputs may be subject to revision or corrections, which may diminish data reliability and quality of predictive results. Changing and unforeseen market dynamics could also lead to a decrease in the short-term or long-term effectiveness of a model. Models may lose their predictive validity and incorrectly forecast future market behavior and asset prices, leading to potential losses. No assurance can be given that a model will be successful under all or any market conditions. The accuracy, timeliness, and sufficiency of information used to construct the models used to manage the Fund's portfolio, particularly information relating to non-U.S. and emerging markets issuers, are susceptible to risks associated with foreign and emerging markets investments, as described under "Foreign Investment Risk" and "Emerging Market Risk" above.

New Fund Risk. The Fund is a new fund with no history of operations for investors to evaluate. Investors in the Fund bear the risk that the Fund may not be successful in implementing its investment strategies, may be unable to implement certain of its investment strategies or may fail to attract sufficient assets, any of which could result in the Fund being liquidated and terminated at any time without shareholder approval and at a time that may not be favorable for all shareholders. Such a liquidation could have negative tax consequences for shareholders and will cause shareholders to incur expenses of liquidation. ETFs and their advisers are subject to restrictions and

limitations imposed by the Investment Company Act of 1940, as amended, and the Internal Revenue Code that do not apply to the Advisor's management of individual and institutional accounts. As a result, the Advisor may not achieve its intended result in managing the Fund.

Non-Diversification Risk. To the extent that the Fund holds securities of a smaller number of issuers or invests a larger percentage of its assets in a single issuer than a diversified portfolio, the value of the Fund, as compared to the value of a diversified portfolio, will generally be more volatile and more sensitive to the performance of any one of those issuers and to economic, political, market or regulatory events affecting any one of those issuers

Underlying Fund Risk. The Underlying Funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in the Underlying Funds and may be higher than other funds that invest directly in stocks and bonds. In addition, when the Fund invests in Underlying Funds, there is a risk that the investment advisers of those Underlying Funds may make investment decisions that are detrimental to the performance of the Fund. Each of the Underlying Funds is subject to its own specific risks. Additional risks of investing in the Underlying Funds below:

- *ETF Tracking Risk.* Investment in the Fund should be made with the understanding that the passive ETFs in which the Fund invests will not be able to replicate exactly the performance of the indices they track because the total return generated by the securities will be reduced by transaction costs incurred in adjusting the actual balance of the securities. In addition, the passive ETFs in which the Fund invests will incur expenses not incurred by their applicable indices. Certain securities comprising the indices tracked by the passive ETFs may, from time to time, temporarily be unavailable, which may further impede the passive ETFs' ability to track their applicable indices.
- *Management Risk.* When the Fund invests in Underlying Funds there is a risk that the investment advisers of those Underlying Funds may make investment decisions that are detrimental to the performance of the Fund.
- *Net Asset Value and Market Price Risk.* The market value of ETF shares may differ from their net asset value. This difference in price may be due to the fact that the supply and demand in the market for fund shares at any point in time is not always identical to the supply and demand in the market for the underlying basket of securities. Accordingly, there may be times when shares trade at a premium or discount to net asset value.
- *Strategies Risk.* Each Underlying Fund is subject to specific risks, depending on the nature of the fund. These risks could include liquidity risk, sector risk, and foreign currency risk, as well as risks associated with fixed income securities and commodities.

U.S. Government Obligations Risk. U.S. Treasury obligations are backed by the "full faith and credit" of the U.S. government and generally have negligible credit risk. Securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises may not be backed by the full faith and credit of the U.S. government, which could affect the Fund's ability to recover should they default. No assurance can be given that the U.S. government will provide financial support to its agencies and authorities if it is not obligated by law to do so.

NON-PRINCIPAL INVESTMENT RISKS

Descriptions of non-principal risks are set forth below. These risks could adversely affect the net asset value, total return and the value of the Fund and your investment.

Asset-Backed Securities Risk. Prepayment risk is associated with asset-backed securities. If interest rates fall, the underlying debt may be repaid ahead of schedule, reducing the value of the Fund's investments. If interest rates

rise, there may be fewer prepayments, which would cause the average bond maturity to rise, increasing the potential for the Fund to lose money. The value of these securities may be significantly affected by changes in interest rates, the market's perception of issuers, and the creditworthiness of the parties involved. The ability of the Fund to successfully utilize these instruments may depend on the ability of the Fund's Advisor to forecast interest rates and other economic factors correctly. These securities may have a structure that makes their reaction to interest rate changes and other factors difficult to predict, making their value highly volatile. Certain asset backed securities may be secured by pools of loans, such as student loans, automobile loans and credit card receivables. The values of assets underlying asset-backed securities may decline and, therefore, may not be adequate to cover underlying investors. To the extent the Fund focuses its investments in particular types of asset-backed securities, the Fund may be more susceptible to risk factors affecting such types of securities.

Bank Loans Risk. The market for bank loans may not be highly liquid and the Fund may have difficulty selling them. These investments expose the Fund to the credit risk of both the financial institution and the underlying borrower. Bank loans settle on a delayed basis, potentially leading to the sale proceeds of such loans not being available to meet redemptions for a substantial period of time after the sale of the bank loans. Certain bank loans may not be considered "securities" under the federal securities laws and purchasers, such as the Fund, therefore may not be entitled to rely on the protections of such laws, including anti-fraud provisions.

Business Development Companies ("BDC") Risk. BDCs may carry risks similar to those of a private equity or venture capital fund. BDC company securities are not redeemable at the option of the shareholder and they may trade in the market at a discount to their net asset value. A BDC is a form of investment company that is required to invest at least 70% of its total assets in securities (typically debt) of private companies, thinly traded U.S. public companies, or short-term high quality debt securities. The BDCs held by the Fund may leverage their portfolios through borrowings or the issuance of preferred stock. While leverage often serves to increase the yield of a BDC, this leverage also subjects a BDC to increased risks, including the likelihood of increased volatility and the possibility that a BDC's common share income will fall if the dividend rate of the preferred shares or the interest rate on any borrowings rises. A significant portion of a BDC's investments are recorded at fair value as determined by its board of directors which may create uncertainty as to the value of the BDC's investments. Non-traded BDCs are illiquid and it may not be possible to redeem shares or to do so without paying a substantial penalty. Publicly-traded BDCs usually trade at a discount to their net asset value because they invest in unlisted securities and have limited access to capital markets. BDCs are subject to high failure rates among the companies in which they invest and federal securities laws impose restraints upon the organization and operations of BDCs that can limit or negatively impact the performance of a BDC. However, the Fund does not believe it would be liable for the actions of any entity in which it invests and that only its investment is at risk. Also, BDCs may engage in certain principal and joint transactions that a mutual fund or closed-end fund may not without an exemptive order from the SEC.

Call Options Risk. There are risks associated with the sale and purchase of call options. As the seller (writer) of a covered call option, the Fund assumes the risk of a decline in the market price of the underlying security below the purchase price of the underlying security less the premium received, and gives up the opportunity for gain on the underlying security above the exercise option price. The Fund continues to bear the risk that it will lose money if the value of the security falls below the strike price. Option premiums are treated as short-term capital gains and when distributed to shareholders, are usually taxable as ordinary income, which may have a higher tax rate than long-term capital gains for shareholders holding Fund shares in a taxable account. As the buyer of a call option, the Fund assumes the risk that the market price of the underlying security will not increase above the strike price plus the premiums paid, so the Fund bears the risk that it will lose the premium paid for the option.

Capacity Risk. The markets and securities in which the Fund invests may, at times, be limited. Under such conditions, the execution of the Fund's strategy may be affected and the Fund may not achieve its investment objective. In addition, the Fund may not be able to purchase or sell securities at favorable market prices.

Cash Transactions. ETFs generally are able to make in-kind redemptions and avoid being taxed on gain on the distributed portfolio securities at the Fund level. Because the Fund may effect redemptions partly or entirely in cash, rather than in-kind, it may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. If the Fund recognizes gain on these sales, this generally will cause the Fund to recognize gain it might not otherwise have recognized, or to recognize such gain sooner than would otherwise be required if it were to distribute portfolio securities in-kind. The Fund generally intends to distribute these gains to shareholders to avoid being taxed on this gain at the Fund level and otherwise comply with the special tax rules that apply to it. This strategy may cause shareholders to be subject to tax on gains they would not otherwise be subject to, or at an earlier date than, if they had made an investment in a different ETF. Moreover, cash transactions may have to be carried out over several days if the securities market is relatively illiquid and may involve considerable brokerage fees and taxes. These brokerage fees and taxes, which will be higher than if the Fund sold and redeemed its shares principally in-kind, could be imposed on the Fund and thus decrease the Fund's NAV to the extent they are not offset by the creation and redemption transaction fees paid by purchasers and redeemers of Creation Units.

Changing Fixed Income Market Conditions Risk. The current low interest rate environment was created in part by actions taken by the Board of Governors of the Federal Reserve System (the "Federal Reserve") to keep the federal funds rate at a historically low level, including expanding the scope of its repurchase agreement operations, and purchasing large quantities of securities issued or guaranteed by the U.S. government, its agencies or instrumentalities on the open market. Any future interest rate increases could cause the value of the Fund to decrease to the extent that it invests in fixed income securities. Federal Reserve policy changes may expose fixed-income and related markets to heightened volatility and may reduce liquidity for certain Fund investments, which could cause the value of the Fund's investments and share price to decline. If the Fund invests in derivatives tied to fixed-income markets, the Fund may be more substantially exposed to these risks than a fund that does not invest in derivatives. To the extent the Fund experiences high redemptions because of these policy changes, the Fund may experience increased portfolio turnover, which will increase the costs the Fund incurs and may lower its performance. Furthermore, if rising interest rates cause the Fund to lose enough value, the Fund could also face increased shareholder redemptions, which could force the Fund to liquidate investments at disadvantageous times or prices, therefore adversely affecting the Fund. In addition, decreases in fixed income dealer market-making capacity may persist in the future, potentially leading to decreased liquidity and increased volatility in the fixed income markets.

CMO Risk. CMOs are subject to credit risk because underlying loan borrowers may default. CMO default rates tend to be sensitive to overall economic conditions and to localized property vacancy rates and prices. Borrower default rates may be significantly higher than estimated. Certain individual securities may be more sensitive to default rates because payments may be subordinated to other securities of the same issuer. The Advisor's assessment, or a rating agency's assessment, of borrower credit quality, default rates and loss rates may prove to be overly optimistic. Additionally, CMOs are subject to prepayment risk because the underlying loans held by the issuers may be paid off prior to maturity at faster or lower rates than expected. The value of these securities may go down as a result of changes in prepayment rates on the underlying mortgages or loans. During periods of declining interest rates, prepayment rates usually increases and the Fund may have to reinvest prepayment proceeds at a lower interest rate. CMOs may be less susceptible to this risk because payment priorities within the CMO may have the effect of a prepayment lock out period.

Collateralized Bond Obligation Risk. The pool of securities underlying collateralized bond obligations is typically separated in groupings called tranches representing different degrees of credit quality. The higher quality tranches have greater degrees of protection and pay lower interest rates. The lower quality tranches carry greater risk and pay higher interest rates.

Collateralized Debt Obligations ("CDO") and Collateralized Loan Obligations ("CLO") Risk. CDOs and CLOs are securities backed by an underlying portfolio of debt and loan obligations, respectively. CDOs and CLOs issue classes or "tranches" that vary in risk and yield and may experience substantial losses due to actual defaults,

decrease of market value due to collateral defaults and removal of subordinate tranches, market anticipation of defaults and investor aversion to CDO and CLO securities as a class. The risks of investing in CDOs and CLOs depend largely on the tranche invested in and the type of the underlying debts and loans in the tranche of the CDO or CLO, respectively, in which the Fund invests. The risks of investing in CDOs and CLOs depend largely on the tranche held by the Fund and the types of underlying debts and loans in such tranche of the CDO or CLO, respectively. The risks of CDOs and CLOs will be greater if the Fund invests in CDOs and CLOs that hold debt or loans of uncreditworthy borrowers or if the Fund holds subordinate tranches of the CDO or CLO that absorb losses from the defaults before senior tranches. CDOs and CLOs also carry risks including, but not limited to, interest rate risk and credit risk.

Commodity Risk. The Fund's exposure to the commodities futures markets may subject the Fund to greater volatility than investments in traditional securities. The value of commodity-linked derivative instruments, commodity-based exchange traded trusts and commodity-based exchange traded funds and notes may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or sectors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs, and international economic, political and regulatory developments.

Conflict of Interest - Advisors Risk. The Advisor and other individuals associated with the Advisor may have compensation and/or other arrangements that may be in conflict to the interests of the Fund.

Conflict of Interest - Portfolio Manager Risk. Actual or apparent conflicts of interest may arise when a portfolio manager has day-to-day management responsibilities with respect to more than one fund or other accounts. More specifically, portfolio managers who manage multiple funds are presented with the following potential conflicts:

- The management of multiple accounts may result in a portfolio manager devoting unequal time and attention to the management of each account. The management of multiple funds and accounts also may give rise to potential conflicts of interest if the funds and accounts have different objectives, benchmarks, time horizons, and fees as the portfolio manager must allocate his time and investment ideas across multiple funds and accounts.
- With respect to securities transactions for the Fund, the Advisor determines which broker to use to execute each order, consistent with the duty to seek best execution of the transaction. The portfolio manager may execute transactions for another fund or account that may adversely impact the value of securities held by the Fund. Securities selected for funds or accounts other than the Fund may outperform the securities selected for the Fund.
- The appearance of a conflict of interest may arise where the Advisor has an incentive, such as a performance-based management fee. The management of personal accounts may give rise to potential conflicts of interest; there is no assurance that the Fund's code of ethics will adequately address such conflicts. One of the portfolio manager's numerous responsibilities is to assist in the sale of Fund shares. Because the portfolio manager's compensation is indirectly linked to the sale of Fund shares, they may have an incentive to devote time to marketing efforts designed to increase sales of Fund shares
- The Advisor has adopted a code of ethics that, among other things, permits personal trading by employees under conditions where it has been determined that such trades would not adversely impact client accounts. Nevertheless, the management of personal accounts may give rise to potential conflicts of interest, and there is no assurance that these codes of ethics will adequately address such conflicts.

Convertible Securities Risk. Convertible bonds are hybrid securities that have characteristics of both bonds and common stocks and are subject to fixed income security risks and conversion value-related equity risk. Convertible bonds are similar to other fixed-income securities because they usually pay a fixed interest rate and are obligated to

repay principal on a given date in the future. The market value of fixed-income securities tends to decline as interest rates increase. Convertible bonds are particularly sensitive to changes in interest rates when their conversion to equity feature is small relative to the interest and principal value of the bond. Convertible issuers may not be able to make principal and interest payments on the bond as they become due. Convertible bonds may also be subject to prepayment or redemption risk. If a convertible bond is called for redemption, the Fund will be required to surrender the security for redemption, convert it into the issuing company's common stock or cash at a time that may be unfavorable to the Fund. Convertible securities have characteristics similar to common stocks especially when their conversion value is greater than the interest and principal value of the bond. The price of equity securities may rise or fall because of economic or political changes. Stock prices in general may decline over short or even extended periods of time. Market prices of equity securities in broad market segments may be adversely affected by a prominent issuer having experienced losses or by the lack of earnings or such an issuer's failure to meet the market's expectations with respect to new products or services, or even by factors wholly unrelated to the value or condition of the issuer, such as changes in interest rates. When a convertible bond's value is more closely tied to its conversion to stock feature, it is sensitive to the underlying stock's price.

Counterparty Risk. The Fund may engage in transactions in securities and financial instruments that involve counterparties. Counterparty risk is the risk that a counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund may be unable or unwilling to make timely principal, interest or settlement payments, or otherwise honor its obligations. To limit the counterparty risk associated with such transactions, the Fund conducts business only with financial institutions judged by the Advisor to present acceptable credit risk.

Credit Risk. Credit risk is the risk that an issuer of a security will fail to pay principal and interest in a timely manner, reducing the Fund's total return. In addition, the credit quality of fixed income securities held by the Fund may be lowered if an issuer's financial condition changes. The issuer of a fixed income security may also default on its obligations. The Fund's exposure to credit risk may be increased through investments in high-yield securities commonly known as "junk bonds."

Credit Risk (for Floating Rate Loans). Credit risk is the risk that the issuer of a security and other instrument will not be able to make principal and interest payments when due. The value of the Fund's shares, and the Fund's ability to pay dividends, is dependent upon the performance of the assets in its portfolio. Prices of the Fund's investments can fall if the actual or perceived financial health of the borrowers on, or issuers of, such investments deteriorates, whether because of broad economic or issuer-specific reasons. In severe cases, the borrower or issuer could be late in paying interest or principal, or could fail to pay altogether.

In the event a borrower fails to pay scheduled interest or principal payments on an investment held by the Fund, the Fund will experience a reduction in its income and a decline in the market value of such investment. This will likely reduce the amount of dividends paid by the Fund and likely lead to a decline in the net asset value and market price of the Fund's shares.

The Fund may invest in floating rate loans that are senior in the capital structure of the borrower or issuer, and that are secured with specific collateral. Loans that are senior and secured generally involve less risk than unsecured or subordinated debt and equity instruments of the same borrower because the payment of principal and interest on senior loans is an obligation of the borrower that, in most instances, takes precedence over the payment of dividends or the return of capital to the borrower's shareholders, and payments to bond holders; and because of the collateral supporting the repayment of the debt instrument. However, the value of the collateral may not equal the Fund's investment when the debt instrument is acquired or may decline below the principal amount of the debt instrument subsequent to the Fund's investment. Also, to the extent that collateral consists of stocks of the borrower, or its subsidiaries or affiliates, the Fund bears the risk that the stocks may decline in value, be relatively illiquid, or may lose all or substantially all of their value, causing the Fund's investment to be undercollateralized. Therefore, the liquidation of the collateral underlying a floating rate loan in which the Fund has invested, may not satisfy the

borrower's obligation to the Fund in the event of non-payment of scheduled interest or principal, and the collateral may not be able to be readily liquidated.

In the event of the bankruptcy of a borrower or issuer, the Fund could experience delays and limitations on its ability to realize the benefits of the collateral securing the Fund's investment. Among the risks involved in a bankruptcy are assertions that the pledge of collateral to secure a loan constitutes a fraudulent conveyance or preferential transfer that would have the effect of nullifying or subordinating the Fund's rights to the collateral.

The floating rate debt in which the Fund invests may be generally rated lower than investment-grade credit quality, i.e., rated lower than "Baa3" by Moody's Investors Service, Inc. ("Moody's") or "BBB-" by S&P Global Ratings ("S&P"), or have been made to borrowers who have issued debt securities that are rated lower than investment-grade in quality or, if unrated, would be rated lower than investment-grade credit quality. A fund's investments in lower than investment-grade floating rate loans will generally be rated at the time of purchase between "B3" and "Ba1" by Moody's, "B-" and "BB+" by S&P or, if not rated, would be of similar credit quality. Investment decisions for the Fund will be based largely on the credit analysis performed by the Advisor, and not entirely on rating agency evaluation. This analysis may be difficult to perform. Information about a loan and its borrower generally is not in the public domain. Many borrowers have not issued securities to the public and are not subject to reporting requirements under federal securities laws. Generally, however, borrowers are required to provide financial information to lenders and information may be available from other loan market participants or agents that originate or administer loans.

Credit Default Swap Risk. Credit default swaps ("CDS") are typically two-party financial contracts that transfer credit exposure between the two parties. Under a typical CDS, one party (the "seller") receives pre-determined periodic payments from the other party (the "buyer"). The seller agrees to make compensating specific payments to the buyer if a negative credit event occurs, such as the bankruptcy or default by the issuer of the underlying debt instrument. The use of CDS involves investment techniques and risks different from those associated with ordinary portfolio security transactions, such as potentially heightened counterparty, concentration and exposure risks.

Currency Risk. Currency trading involves significant risks, including market risk, interest rate risk, country risk, counterparty credit risk and short sale risk. Market risk results from the price movement of foreign currency values in response to shifting market supply and demand. Since exchange rate changes can readily move in one direction, a currency position carried overnight or over a number of days may involve greater risk than one carried a few minutes or hours. Interest rate risk arises whenever a country changes its stated interest rate target associated with its currency. Country risk arises because virtually every country has interfered with international transactions in its currency. Interference has taken the form of regulation of the local exchange market, restrictions on foreign investment by residents or limits on inflows of investment funds from abroad. Restrictions on the exchange market or on international transactions are intended to affect the level or movement of the exchange rate. This risk could include the country issuing a new currency, effectively making the "old" currency worthless. The Fund may also take short positions, through derivatives, if the Advisor believes the value of a currency is likely to depreciate in value. A "short" position is, in effect, similar to a sale in which the Fund sells a currency it does not own but, has borrowed in anticipation that the market price of the currency will decline. The Fund must replace a short currency position by purchasing it at the market price at the time of replacement, which may be more or less than the price at which the Fund took a short position in the currency.

Cybersecurity Risk. The computer systems, networks and devices used by the Fund and its service providers to carry out routine business operations employ a variety of protections designed to prevent damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons and security breaches. Despite the various protections utilized by the Fund and its service providers, systems, networks, or devices potentially can be breached. The Fund and its shareholders could be negatively impacted as a result of a cybersecurity breach.

Cybersecurity breaches can include unauthorized access to systems, networks, or devices; infection from computer viruses or other malicious software code; and attacks that shut down, disable, slow, or otherwise disrupt operations, business processes, or website access or functionality. Cybersecurity breaches may cause disruptions and impact the Fund's business operations, potentially resulting in financial losses; interference with the Fund's ability to calculate its NAV; impediments to trading; the inability of the Fund, the Advisor and other service providers to transact business; violations of applicable privacy and other laws; regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs; as well as the inadvertent release of confidential information.

Similar adverse consequences could result from cybersecurity breaches affecting issuers of securities in which the Fund invests; counterparties with which the Fund engages in transactions; governmental and other regulatory authorities; exchange and other financial market operators, banks, brokers, dealers, insurance companies, and other financial institutions (including financial intermediaries and service providers for the Fund's shareholders); and other parties. In addition, substantial costs may be incurred by these entities in order to prevent any cybersecurity breaches in the future.

Duration Risk. Longer-term securities may be more sensitive to interest rate changes. Given the recent, historically low interest rates and the potential for increases in those rates, a heightened risk is posed by rising interest rates to a fund whose portfolio includes longer-term fixed income securities. Effective duration estimates price changes for relatively small changes in rates. If rates rise significantly, effective duration may tend to understate the drop in a security's price. If rates drop significantly, effective duration may tend to overstate the rise in a security's price. Duration should not be confused with maturity. The maturity of a fixed income security is a measure of the amount of time left until the security "matures" or repays its face value. In contrast, duration measures the price sensitivity of a fixed income security to changes in interest rates rather than the amount of time remaining to maturity. Longer duration tends to result in greater volatility and a greater sensitivity to interest rate changes. For example, a five year duration means that the fixed income security will decrease in value by 5% if interest rates rise 1% and increase in value by 5% if interest rates fall 1%.

Exchange Traded Note ("ETN") Risk. Similar to ETFs, owning an ETN generally reflects the risks of owning the assets that comprise the underlying market benchmark or strategy that the ETN is designed to reflect. ETNs also are subject to issuer and fixed income risk. In addition, ETNs are subject to counterparty risk, which is the risk that the broker-dealer or bank that issues the notes will not fulfill its contractual obligation to complete the transaction with the Fund. ETNs constitute general unsecured contractual obligations of the banks or broker-dealers that issue them, and the Fund is relying on the creditworthiness of such banks or broker-dealers. ETNs that are linked to market volatility are subject to default risk of the issuer; may not provide an effective hedge as historical correlation trends between the reference volatility index or measure and other asset classes may not continue or may reverse, limiting or eliminating any potential hedging effect; may become mispriced or improperly valued when compared to expectations and may not produce the desired investment results; may have tracking risk if the ETN does not move in step with its reference index; and may become illiquid.

Extension Risk. Extension risk is the risk that if interest rates rise, repayments of principal on certain debt securities, including, but not limited to, floating rate loans and mortgage-related securities, may occur at a slower rate than expected and the expected maturity of those securities could lengthen as a result. Securities that are subject to extension risk generally have a greater potential for loss when prevailing interest rates rise, which could cause their values to fall sharply.

Fixed Income Securities Risk. The value of the Fund's fixed income securities will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the risk that the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate

obligation held by the Fund later than expected), and prepayment risk (the risk that the debtor may pay its obligation early, reducing the amount of interest payments). Recently, interest rates have been historically low and interest rate risk may be heightened. Other risk factors include credit risk (the risk that the debtor may default). Lowered credit ratings may cause a drop in a fixed income security's price and are associated with greater risk of default on interest and principal payments. Certain fixed income securities may be paid off early when the issuer can repay the principal prior to a security's maturity. If interest rates are falling, the Fund may have to reinvest the unanticipated proceeds at lower interest rates, resulting in a decline in the Fund's income. If interest rates rise, repayments of principal on certain fixed income securities may occur at a slower rate than expected and the expected maturity of those securities could lengthen as a result, which reduces the Fund's ability to reinvest at higher rates. These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.

Floating Rate Loans Risk. The Fund may invest in floating rate loans that are senior in the capital structure of the borrower or issuer, and that are secured with specific collateral. Loans that are senior and secured generally involve less risk than unsecured or subordinated debt and equity instruments of the same borrower because the payment of principal and interest on senior loans is an obligation of the borrower that, in most instances, takes precedence over the payment of dividends or the return of capital to the borrower's shareholders, and payments to bond holders; and because of the collateral supporting the repayment of the debt instrument. However, the value of the collateral may not equal the Fund's investment when the debt instrument is acquired or may decline below the principal amount of the debt instrument subsequent to the Fund's investment. Also, to the extent that collateral consists of stocks of the borrower, or its subsidiaries or affiliates, the Fund bears the risk that the stocks may decline in value, be relatively illiquid or may lose all or substantially all of their value, causing the Fund's investment to be under-collateralized. Therefore, the liquidation of the collateral underlying a floating rate loan in which the Fund has invested, may not satisfy the borrower's obligation to the Fund in the event of non-payment of scheduled interest or principal, and the collateral may not be able to be readily liquidated.

In the event of the bankruptcy of a borrower or issuer, the Fund could experience delays and limitations on its ability to realize the benefits of the collateral securing the Fund's investment. Among the risks involved in a bankruptcy are assertions that the pledge of collateral to secure a loan constitutes a fraudulent conveyance or preferential transfer that would have the effect of nullifying or subordinating the Fund's rights to the collateral.

Floating rate loans are also subject to interest rate risk arising from changes in short-term market interest rates. If short-term market interest rates fall, the yield on the Fund's shares will also fall. Conversely, when short-term market interest rates rise, because of the lag between changes in such short-term rates and the resetting of the floating rates on the floating rate debt in the Fund's portfolio, the impact of rising rates will be delayed to the extent of such lag. The impact of market interest rate changes on the Fund's yield will also be affected by whether, and the extent to which, the floating rate debt in the Fund's portfolio is subject to floors on the LIBOR base rate on which interest is calculated for such loans (a "LIBOR floor"). So long as the base rate for a loan remains under the LIBOR floor, changes in short-term interest rates will not affect the yield on such loans. In addition, to the extent that the interest rate spreads on floating rate debt in the Fund's portfolio experience a general decline, the yield on the Fund's shares will fall and the value of the Fund's assets may decrease, which will cause the Fund's net asset value to decrease.

The floating rate debt in which the Fund invests may be generally rated lower than investment-grade credit quality, i.e., rated lower than "Baa3" by Moody's Investors Service, Inc. ("Moody's") or "BBB-" by S&P Global Ratings ("S&P"), or have been made to borrowers who have issued debt securities that are rated lower than investment-grade in quality or, if unrated, would be rated lower than investment-grade credit quality. Investment decisions for the Fund will be based largely on the credit analysis performed by the Advisor, and not entirely on rating agency evaluation. This analysis may be difficult to perform. Information about a loan and its borrower generally is not in the public domain. Many borrowers have not issued securities to the public and are not subject to reporting requirements under federal securities laws. Generally, however, borrowers are required to provide financial

information to lenders and information may be available from other loan market participants or agents that originate or administer loans.

Foreign Currency Risk. Currency trading risks include market risk, credit risk and country risk. Market risk results from adverse changes in exchange rates in the currencies the Fund is long or short. Credit risk results because a currency-trade counterparty may default. Country risk arises because a government may interfere with transactions in its currency.

Foreign Exchanges Risk. Neither existing CFTC regulations nor regulations of any other U.S. governmental agency apply to derivative transactions on foreign markets. Some of these foreign markets, in contrast to U.S. exchanges, are so-called principals' markets in which performance is the responsibility only of the individual counterparty with whom the trader has entered into a commodity interest transaction and not of the exchange or clearing corporation. In these kinds of markets, there is risk of bankruptcy or other failure or refusal to perform by the counterparty.

Forwards Risk. Foreign currency forward contracts are a type of derivative contract whereby the Fund may agree to buy or sell a country's or region's currency at a specific price on a specific date, usually 30, 60, or 90 days in the future. These contracts are subject to the risk of political and economic factors applicable to the countries issuing the underlying currencies and may fall in value due to foreign market downswings or foreign currency value fluctuations. Forward foreign currency contracts are individually negotiated and privately traded so they are dependent upon the creditworthiness of the counterparty and subject to counterparty risk. The Fund's investment or hedging strategies may not achieve their objective. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Derivative contracts ordinarily have leverage inherent in their terms and low margin deposits normally required in trading derivatives permit a high degree of leverage. Accordingly, a relatively small price movement may result in an immediate and substantial loss to the Fund. The use of leverage may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations or to meet collateral segregation requirements. The use of leveraged derivatives can magnify the Fund's potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund's share price.

Income Risk. The Fund's distributions to shareholders may decline when prevailing interest rates fall, when the Fund experiences deterioration of the underlying debt securities it holds, or when the Fund realizes a loss upon the sale of a debt security.

Index-Linked Derivative Securities Risk. If the derivative is linked to the performance of an index, it will be subject to the risks associated with changes in that index.

Inflation Protected Securities Risk. Inflation-protected debt securities tend to react to changes in real interest rates. Real interest rates represent nominal (stated) interest rates reduced by the expected impact of inflation. In general, the price of an inflation-protected debt security can fall when real interest rates rise, and can rise when real interest rates fall. Interest payments on inflation-protected debt securities can be unpredictable and will vary as the principal and/or interest is adjusted for inflation.

Inflation-Indexed Bond Risk. Inflation-indexed bonds are fixed income securities whose principal values are periodically adjusted according to a measure of inflation. If the index measuring inflation falls, the principal value of inflation-indexed bonds will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury inflation indexed bonds. For bonds that do not provide a similar guarantee, the adjusted principal value of the bond repaid at maturity may be

less than the original principal. With regard to municipal inflation-indexed bonds and certain corporate inflation-indexed bonds, the inflation adjustment is reflected in the semi-annual coupon payment. As a result, the principal value of municipal inflation-indexed bonds and such corporate inflation indexed bonds does not adjust according to the rate of inflation. The value of inflation-indexed bonds is expected to change in response to changes in real interest rates. Real interest rates are tied to the relationship between nominal interest rates and the rate of inflation. If nominal interest rates increase at a faster rate than inflation, real interest rates may rise, leading to a decrease in value of inflation-indexed bonds. Inflation-indexed bonds may cause a potential cash flow mismatch to investors, because an increase in the principal amount of an inflation-indexed bond will be treated as interest income currently subject to tax at ordinary income rates even though investors will not receive repayment of principal until maturity. If the Fund invests in such bonds, it will be required to distribute such interest income in order to qualify for treatment as a regulated investment company and eliminate the Fund-level tax, without a corresponding receipt of cash, and therefore may be required to dispose of portfolio securities at a time when it may not be desirable.

Interest Rate Risk. Interest rate risk is the risk that prices of fixed income securities overall, including the prices of securities held by the Fund, will decline over short or even long periods of time due to rising interest rates. Fixed income securities with longer maturities tend to be more sensitive to interest rates than fixed income securities with shorter maturities. For example, if interest rates go up by 1.0%, the price of a fixed income security with a 4% coupon will decrease by approximately 1.0% for a fixed income security with 1 year to maturity and approximately 4.4% for a fixed income security with 5 years to maturity. The maturity and effective duration of the Fund's investment portfolio may vary materially, from time to time, and there is no assurance that the Fund will achieve or maintain any particular target maturity or effective duration of its investment portfolio.

Inverse ETF and ETN Risk. Investing in inverse ETFs and ETNs may result in increased volatility due to the ETF's or ETN's possible use of short sales of securities and derivatives such as options and futures. The use of leverage by an ETF or ETN increases risk to the Fund. The more the Fund invests in leveraged instruments, the more the leverage will magnify any gains or losses on those investments. During periods of increased volatility, inverse ETFs and ETNs may not perform in the manner they are designed.

Investment Style Risk. The particular type of investments in which the Fund may underperform other asset classes or the overall market. Individual market segments tend to go through cycles of performing better or worse than other types of securities. These periods may last as long as several years. Additionally, a particular market segment could fall out of favor with investors, causing the Fund, when it focuses on that market segment, to underperform those that favor other kinds of securities.

Issuer Specific Risk. The value of a specific security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than those of larger issuers. The value of certain types of securities can be more volatile due to increased sensitivity to adverse issuer, political, regulatory, market, or economic developments. Certain managers may be dependent upon a single individual or small group of individuals, the loss of which could adversely affect their success.

Junk Bond Risk. Lower-quality bonds, known as "high yield" or "junk" bonds are considered to be speculative with respect to the issuer's ability to pay interest and principal when due and present a significant risk for loss of principal and interest. These bonds offer the potential for higher return, but also involve greater risk than bonds of higher quality, including an increased possibility that the bond's issuer, obligor or guarantor may not be able to make its payments of interest and principal (credit quality risk). If that happens, the value of the bond may decrease, and the Fund's share price may decrease and its income distribution may be reduced. An economic downturn or period of rising interest rates (interest rate risk) could adversely affect the market for these bonds and reduce the Fund's ability to sell the bonds in its portfolio (liquidity risk). Such securities may also include "Rule 144A" securities, which are subject to resale restrictions. The lack of a liquid market for these bonds could decrease the value of the Fund's portfolio and net asset value per share.

LIBOR Risk. The Fund may invest in LIBOR-linked investments and it was announced that that LIBOR would be phased out by the end of 2021. Although many LIBOR rates were phased out at the end of 2021 as originally intended, a selection of widely used USD LIBOR rates will continue to be published until June 2023 in order to assist with the transition. While some instruments may contemplate a scenario where LIBOR is no longer available by providing for an alternative rate setting methodology, not all instruments may have such provisions and there is significant uncertainty regarding the effectiveness of any such alternative methodologies and potential for short-term and long-term market instability. Because of the uncertainty regarding the nature of any replacement rate, the Fund cannot reasonably estimate the impact of the anticipated transition away from LIBOR at this time. If the LIBOR replacement rate is lower than market expectations, there could be an adverse impact on the value of preferred and debt securities with floating or fixed-to-floating rate coupons.

Liquidity Risk. Liquidity risk exists when particular investments of the Fund would be difficult to purchase or sell, possibly preventing the Fund from selling such illiquid securities at an advantageous time or price, or possibly requiring the Fund to dispose of other investments at unfavorable times or prices in order to satisfy its obligations. Liquid securities can become illiquid due to political, economic or issuer specific events; supply/demand imbalances; changes in a specific market's size or structure, including the number of participants; or overall market disruptions.

Litigation Risk. The Fund may be named in a lawsuit despite no wrongdoing by the Fund, its Advisor or any other service provider to the Fund. The defense of a lawsuit may detrimentally impact the Fund and its shareholders, including incurring legal defense cost, regulatory costs and increased insurance premiums.

Loan Risk. Investments in bank loans may subject the Fund to heightened credit risks because such loans tend to be highly leveraged and potentially more susceptible to the risks of interest deferral, default and/or bankruptcy. Senior floating rate loans are often rated below investment grade, but may also be unrated. The risks associated with these loans can be similar to the risks of below investment grade fixed income instruments. An economic downturn would generally lead to a higher non-payment rate, and a senior floating rate loan may lose significant market value before a default occurs. Moreover, any specific collateral used to secure a senior floating rate loan may decline in value or become illiquid, which would adversely affect the loan's value. Unlike the securities markets, there is no central clearinghouse for loan trades, and the loan market has not established enforceable settlement standards or remedies for failure to settle. Therefore, portfolio transactions in loans may have uncertain settlement time periods. Senior floating rate loans are subject to a number of risks described elsewhere in this Prospectus, including liquidity risk and the risk of investing in below-investment grade fixed income instruments.

Market Volatility-Linked ETFs Risk. ETFs that are linked to market volatility have the risks associated with investing in futures.

Mortgage-Backed Securities Risk. Mortgage-backed securities represent participating interests in pools of residential mortgage loans, some of which are guaranteed by the U.S. government, its agencies or instrumentalities. However, the guarantee of these types of securities relates to the principal and interest payments and not the market value of such securities. In addition, the guarantee only relates to the mortgage-backed securities held by the Fund and not the purchase of shares of the Fund.

Mortgage-backed securities do not have a fixed maturity and their expected maturities may vary when interest rates rise or fall. An increased rate of prepayments on the Fund's mortgage-backed securities will result in an unforeseen loss of interest income to the Fund as the Fund may be required to reinvest assets at a lower interest rate. A decreased rate of prepayments lengthens the expected maturity of a mortgage-backed security, causing the price of the mortgage-backed securities and the Fund's net asset value per share to fall and making the mortgage-backed securities more sensitive to interest rate changes. The prices of mortgage-backed securities may decrease more than prices of other fixed-income securities when interest rates rise. An unexpectedly high rate of defaults on the mortgages held by a mortgage pool will adversely affect the value of mortgage-backed securities and will result in

losses to the Fund. The liquidity of mortgage-backed securities may change over time. Mortgage-backed securities and other securities issued by participants in housing and commercial real estate finance, as well as other real estate-related markets have experienced extraordinary weakness and volatility in certain years.

Mortgage-backed securities issued or guaranteed by private issuers are also known as “non-agency mortgage-backed securities.” Non-agency mortgage-backed securities are not subject to the same underwriting requirements as those with government or government-sponsored entity guarantees and, therefore, mortgage loans underlying privately issued mortgage-related securities may have less favorable collateral, credit risk or other underwriting characteristics, and wider variances in interest rate, term, size, purpose and borrower characteristics. The market for non-agency mortgage-backed securities is smaller and less liquid than the market for government-issued mortgage-backed securities.

Municipal Bond Risk. The value of municipal bonds that depend on a specific revenue source or general revenue source to fund their payment obligations may fluctuate as a result of changes in the cash flows generated by the revenue source(s) or changes in the priority of the municipal obligation to receive the cash flows generated by the revenue source(s). In addition, changes in federal tax laws or the activity of an issuer may adversely affect the tax-exempt status of municipal bonds. Investments in inverse floating rate securities typically involve greater risk than investments in municipal bonds of comparable maturity and credit quality and their values are more volatile than municipal bonds due to the leverage they entail.

Over-the-Counter (“OTC”) Trading Risk. Certain of the derivatives in which the Fund may invest may be traded (and privately negotiated) in the OTC market. While the OTC derivatives market is the primary trading venue for many derivatives, it is largely unregulated. As a result and similar to other privately negotiated contracts, the Fund is subject to counterparty credit risk with respect to such derivative contracts.

Prepayment Risk. The Fund may invest in debt securities that may be paid off early when the issuer of a debt security can repay the principal prior to a security’s maturity. If interest rates are falling, the Fund may have to reinvest the unanticipated proceeds at lower interest rates, resulting in a decline in the Fund’s income.

Real Estate Risk. The Fund is subject to the risks of the real estate market as a whole, such as taxation, regulations and economic and political factors that negatively impact the real estate market and the direct ownership of real estate. These may include decreases in real estate values, overbuilding, rising operating costs, interest rates and property taxes. In addition, some real estate related investments are not fully diversified and are subject to the risks associated with financing a limited number of projects.

REIT Risk. Investing in REITs involves certain unique risks in addition to those associated with the real estate sector generally. REITs whose underlying properties are concentrated in a particular industry or region are also subject to risks affecting such industries and regions. REITs (especially mortgage REITs) are also subject to interest rate risks. By investing in REITs through the Fund, a shareholder will bear expenses of the REITs in addition to Fund expenses. An entity that fails to qualify as a REIT would be subject to a corporate level tax, would not be entitled to a deduction for dividends paid to its shareholders and would not pass through to its shareholders the character of income earned by the entity.

Regulatory Risk. Regulatory authorities in the United States or other countries may adopt rules that restrict the ability of the Fund to fully implement its strategy, either generally, or with respect to certain securities, industries or countries, which may impact the Fund’s ability to fully implement its investment strategies. Regulators may interpret rules differently than the Fund or the fund industry generally, and disputes over such interpretations can increase in legal expenses incurred by the Fund.

Repurchase and Reverse Repurchase Agreements Risk. The Fund may enter into repurchase agreements in which it purchases a security (known as the “underlying security”) from a securities dealer or bank. In the event of

a bankruptcy or other default by the seller of a repurchase agreement, the Fund could experience delays in liquidating the underlying security. The Fund may also experience losses in the event of a decline in the value of the underlying security while the Fund is seeking to enforce its rights under the repurchase agreement. Reverse repurchase agreements involve the sale of securities held by the Fund with an agreement to repurchase the securities at an agreed-upon price, date and interest payment, and involve the risk that (i) the other party may fail to return the securities in a timely manner, or at all, and (ii) the market value of assets that are required to be repurchased decline below the purchase price of the asset that has to be sold, resulting in losses to the Fund.

Restricted Securities Risk. The Fund may hold securities that are restricted as to resale under the U.S. federal securities laws. There can be no assurance that a trading market will exist at any time for any particular restricted security. Limitations on the resale of these securities may prevent the Fund from disposing of them promptly at reasonable prices or at all. The Fund may have to bear the expense of registering the securities for resale and the risk of substantial delays in effecting the registration. Also, restricted securities may be difficult to value because market quotations may not be readily available, and the values of restricted securities may have significant volatility.

Risk Management Risk. The measures that the Advisor or portfolio manager use to monitor and manage the risks of the Fund may not accomplish the intended results and the Fund may experience losses significantly greater than expected.

Sector Risk. If the Fund focuses its investments within a particular sector, it is subject to increased risk. Performance will generally depend on the performance of the sector, which may differ in direction and degree from that of the overall U.S. stock markets. In addition, financial, economic, business and political developments affecting the Sector may have a greater effect on the Fund than they would if the Fund did not focus on that Sector.

Security Risk. The value of the Fund may decrease in response to the activities and financial prospects of an individual security in the Fund's portfolio. The net asset value of the Fund will fluctuate based on changes in the value of the securities in which the Fund invests. The Fund may invest in securities that may be more volatile and carry more risk than some other forms of investment. The price of securities may rise or fall because of economic or political changes. Security prices in general may decline over short or even extended periods of time. Market prices of securities in broad market segments may be adversely affected by a prominent issuer having experienced losses, lack of earnings, failure to meet the market's expectations with respect to new products or services, or even by factors wholly unrelated to the value or condition of the issuer, such as changes in interest rates.

Short Selling Risk. If a security or other instrument sold short increases in price, the Fund may have to cover its short position at a higher price than the short sale price, resulting in a loss. The Fund may have substantial short security positions and must borrow those securities to make delivery to the buyer. The Fund may not be able to borrow a security that it needs to deliver or it may not be able to close out a short position at an acceptable price and may have to sell related long positions before it had intended to do so. Thus, the Fund may not be able to successfully implement its short sale strategy due to limited availability of desired securities or for other reasons.

The Fund also may be required to pay a commission and other transaction costs, which would increase the cost of the security sold short. The amount of any gain will be decreased, and the amount of any loss increased, by the amount of the commission, dividends, interest or expenses the Fund may be required to pay in connection with the short sale.

Until the Fund replaces a borrowed security, it is required to maintain a segregated account of cash or liquid assets with a broker or custodian to cover the Fund's short position. Generally, securities held in a segregated account cannot be sold unless they are replaced with other liquid assets. The Fund's ability to access the pledged collateral may also be impaired in the event the broker fails to comply with the terms of the contract. In such instances the Fund may not be able to substitute or sell the pledged collateral. Additionally, the Fund must maintain sufficient liquid assets (less any additional collateral pledged to the broker), marked-to-market daily, to cover the short sale

obligations. This may limit the Fund's investment flexibility and may cause the Fund to miss favorable trading opportunities due to a lack of sufficient cash or readily marketable securities. This may also affect the Fund's ability to meet redemption requests or other current obligations. This requirement may also cause the Fund to realize losses on offsetting or terminated derivative contracts or special transactions.

Because losses on short sales arise from increases in the value of the security sold short, such losses are theoretically unlimited. By contrast, a loss on a long position arises from decreases in the value of the security and is limited by the fact that a security's value cannot go below zero.

Sovereign Debt Risk. The issuer of foreign debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal or interest when due, and the Fund may have limited recourse in the event of a default. The market prices of sovereign debt, and the Fund's net asset value, may be more volatile than prices of U.S. debt obligations and certain emerging markets may encounter difficulties in servicing their debt obligations.

Structured Note Risk. The Fund may seek investment exposure to sectors through structured notes that may be exchange traded or may trade in the over the counter market. These notes are typically issued by banks or brokerage firms, and have interest and/or principal payments which are linked to changes in the price level of certain assets or to the price performance of certain indices. The value of a structured note will be influenced by time to maturity, level of supply and demand for this type of note, interest rate and market volatility, changes in the issuer's credit quality rating, and economic, legal, political, events that affect the industry, and adverse changes in the index or reference asset to which the payments are linked. In addition, there may be a lag between a change in the value of the underlying reference asset and the value of the structured note. Structured notes may also be subject to counterparty risk. The Fund may also be exposed to increased transaction costs when it seeks to sell such notes in the secondary market.

Volatility Risk. The Fund may have investments that appreciate or decrease significantly in value of short periods of time. This may cause the Fund's net asset value and market price per share to experience significant increases or declines in value over short periods of time, however, all investments long- or short-term are subject to risk of loss.

Exclusion of Advisor from Commodity Pool Operator Definition

With respect to the Fund, the Advisor intends to claim an exclusion from the definition of "commodity pool operator" ("CPO") under the Commodity Exchange Act (the "CEA") and the rules of the CFTC and, therefore, will not be subject to CFTC registration or regulation as a CPO. In addition, with respect to the Fund, the Advisor intends to rely upon a related exclusion from the definition of "commodity trading adviser" under the CEA and the rules of the CFTC.

The terms of the CPO exclusion will require the Fund, among other things, to adhere to certain limits on its investments in commodity futures, commodity options and swaps, which in turn include non-deliverable currency forward contracts, as further described in the Fund's SAI. Because the Advisor and the Fund intend to comply with the terms of the CPO exclusion, the Fund may, in the future, need to adjust its investment strategies, consistent with its investment objective, to limit its investments in these types of instruments. The Fund is not intended as a vehicle for trading in the commodity futures, commodity options, or swaps markets. The CFTC has neither reviewed nor approved the Advisor's reliance on these exclusions, or the Fund, its investment strategies or this Prospectus.

SHAREHOLDER INFORMATION

Purchasing and Selling Fund Shares on the Secondary Market

General. Most investors will buy and sell shares of the Fund in secondary market transactions through their financial institution. Shares of the Fund will be listed for trading in the secondary market on the Exchange. The Exchange is currently open for business each day other than weekends and the following national holidays: New Year's Day, Martin Luther King Jr. Day, Presidents' Day, Good Friday, Memorial Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day.

The Fund's shares trade on the Exchange under the following symbol:

<u>Fund</u>	<u>Symbol</u>
Day Hagan/Ned Davis Research Smart Sector International ETF	SSXU

Shares of the Fund can be bought and sold throughout the trading day at their market price like other publicly traded equity securities. If you purchase shares of the Fund in the secondary market, there is no minimum investment. While shares of the Fund will typically be purchased and sold in the secondary market in "round lots" of 100 shares, your financial institution may permit you to purchase or sell shares in smaller "odd-lots" at no per-share price differential. When purchasing or selling Fund shares through your financial institution, you will pay customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and offer price in the secondary market.

The market price of Fund shares may be below (a discount), at, or above (a premium) their most recently calculated NAV and can be affected by market forces of supply and demand for the Fund's shares, the prices of the Fund's portfolio securities, economic conditions and other factors.

Purchasing Shares from and Redeeming Shares with the Fund

General. On each Business Day, you may purchase shares directly from the Fund, and you may tender shares for redemption directly to the Fund in a Creation Unit or multiples thereof. Each Creation Unit is currently comprised of 25,000 shares. The number of shares comprising a Creation Unit may change over time. Once "created," shares of the Fund will generally trade in the secondary market in amounts less than a Creation Unit (see "Shareholder Information – Purchasing and Selling Fund Shares on the Secondary Market").

To purchase or redeem Creation Units of the Fund, you must be an Authorized Participant or you must purchase or redeem the shares through a financial institution that is an Authorized Participant. The Distributor will provide a list of Authorized Participants upon request.

The Fund processes orders for the purchase and redemption of Creation Units at the NAV next calculated after an order has been received in proper form by the Distributor.

Except where the purchase or redemption will include cash under certain circumstances, investors will generally be required to purchase Creation Units by making an in-kind deposit of specified instruments ("Deposit Instruments"), and shareholders redeeming Creation Units will generally receive an in-kind transfer of specified instruments ("Redemption Instruments"). The name and quantities of the instruments that constitute the Fund's Deposit Instruments and the names and quantities of the instruments that constitute the Fund's Redemption Instruments will be specified by the Fund each day, and these instruments are referred to, in the case of either a purchase or a redemption, as the "Creation Basket." If there is a difference between the net asset value attributable to a Creation

Unit and the aggregate market value of the Creation Basket exchanged for the Creation Unit, the party conveying instruments with the lower value will also pay to the other an amount in cash equal to that difference.

The Fund generally does not offer or sell its shares outside of the U.S. Also, the Fund reserves the right to reject any purchase request at any time, for any reason, and without notice.

Additional information regarding the purchase and redemption of the Fund's Creation Units may be found in the "Purchase and Redemption of Creation Units" section of the SAI.

Continuous Offering. Because new shares may be created and issued on an ongoing basis during the life of the Fund, a "distribution," as such term is used in the Securities Act of 1933 ("1933 Act"), may be occurring. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner that could render them statutory underwriters and subject to the prospectus delivery and liability provisions of the 1933 Act. Any determination of whether one is an underwriter must take into account all the relevant facts and circumstances of each particular case.

Broker-dealers should also note that dealers who are not "underwriters" but are participating in a distribution (as compared to ordinary secondary market transactions), and thus dealing with shares that are part of an "unsold allotment" within the meaning of Section 4(3)(C) of the 1933 Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the 1933 Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the 1933 Act is available only with respect to transactions on a national securities exchange.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The DTC, or its nominee, will be the record owner or registered owner of all outstanding shares of the Fund and is recognized as the owner of all such shares. Your beneficial interest in the shares of the Fund will be reflected on the records of the DTC or its participants. Participants in the DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with the DTC. As a beneficial owner of shares of the Fund, you are not entitled to receive physical delivery of stock certificates or to have shares of any Fund registered in your name, and you are not considered a registered owner of those shares. Therefore, to exercise any right as an owner of Fund shares, you must rely on the procedures of the DTC and its participants. These procedures are the same as those that apply to any other stocks that you hold in book entry or "street name" form through your financial institution.

Calculation of Net Asset Value

The Fund's NAV is determined by dividing the total value of the Fund's portfolio investments and other assets, less any liabilities, by the total number of shares outstanding as of the close of regular trading on the Exchange (normally 4:00 p.m., Eastern Time) on each day that the Exchange is open for business. Since the Fund may invest a portion of its investment portfolio in foreign securities that trade on weekends or other days that the Fund does not price its shares, the NAV of the Fund may change on days when shareholders will not be able to purchase or redeem Creation Units.

In computing the NAV for the Fund, current market value is used to value portfolio securities with respect to which market quotations are readily available, except short-term investments with remaining maturities of 60 days or less which are valued at amortized cost. Pursuant to Board-approved policies, the Fund relies on certain security pricing services to provide current market value of securities.

Securities for which market quotations are not readily available are valued at their “fair value” pursuant to Board-approved procedures. Market quotations may not be readily available if: (1) a portfolio security is not traded in a public market or the principal market in which the security trades are closed; (2) trading in a portfolio security is suspended and not resumed prior to the normal market close; (3) a portfolio security is not traded in significant volume for a substantial period; (4) the value of a portfolio security has been materially affected by events occurring after the close of the market on which the security is principally traded; or (5) the Advisor determines that the quotation or price for a portfolio security provided by an independent pricing source is inaccurate. The securities of smaller companies in which the Fund may invest may be susceptible to fair valuation since these securities may be thinly traded and less liquid than their larger counterparts. Similarly, the Fund’s investments in foreign securities, if any, are more likely to require a fair value determination because, among other things, events may occur between the closure of the foreign market and the time that the Fund calculates its NAV that affect the reported market value of these securities.

There can be no assurance that the Fund could purchase or sell a portfolio security at the price used to calculate the Fund’s NAV. In the case of fair valued portfolio securities, lack of information and uncertainty as to the significance of information may lead to a conclusion that a prior valuation is the best indication of a portfolio security’s present value. Fair valuations generally remain unchanged until new information becomes available. Consequently, changes in the fair valuation of portfolio securities may be less frequent and of greater magnitude than changes in the price of portfolio securities valued at their last sale price by an independent pricing service, or based on market quotations. Fair valuation determinations often involve the consideration of a number of subjective factors, and the fair value price may be higher or lower than a readily available market quotation.

Frequent Purchases and Sales of Fund Shares

The Board has not adopted policies and procedures with respect to frequent purchases and sales of Fund shares. Frequent purchases and sales of the Fund’s shares in the secondary market are not expected to subject the Fund to the harmful effects of market timing and excessive trading such as dilution, the disruption of portfolio management, an increase in portfolio trading costs, and/or the realization of capital gains since these transactions do not involve the Fund directly. It is not anticipated that these effects will materialize as a result of the issuance and redemption of Creation Units by the Fund since these transactions will generally be processed on an in-kind basis (that is for a basket of portfolio securities and not for cash). Transaction fees will be imposed on purchases and redemptions of Creation Units, which are intended to offset custodial and other costs to the Fund incurred in processing the transactions in-kind. To the extent that the Fund permits the purchase or redemption of Creation Units in part or wholly in cash, higher transaction fees will be imposed, which are intended to offset the Fund’s increased trading costs to purchase or redeem portfolio securities in connection these transactions.

Portfolio Holdings Information

A description of the Fund’s policies and procedures with respect to the disclosure of portfolio securities is available in the SAI.

DISTRIBUTION OF THE FUND

The Fund has adopted but has yet to implement a Rule 12b-1 Distribution Plan (“Plan”), pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year for certain distribution-related activities and shareholder services.

No 12b-1 fees are currently paid by the Fund, and there are no plans to impose these fees. However, in the event 12b-1 fees are charged in the future, because the fees are paid out of the Fund’s assets, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

Additional Payments to Financial Intermediaries

The Advisor and its affiliates may pay, out of their own profits and reasonable resources, amounts (including items of material value) to certain financial intermediaries for the sale of Fund shares or related services. The amounts of these payments could be significant, and may create an incentive for the financial intermediaries or their employees or associated persons to recommend or sell Fund shares to you. These payments are not reflected in the fees and expenses listed in the fee table section of this Prospectus because they are not paid by the Fund.

These payments are negotiated and may be based on such factors as the number or value of Fund shares that the financial intermediary sells or may sell; the value of client assets invested; or the type and nature of services or support furnished by the financial intermediary. These payments may be in addition to payments made by any Fund to a financial intermediary under the Plan, if implemented. Ask your financial intermediary for information about any payments it receives from the Advisor, their affiliates, or the Fund and any services the financial intermediary provides to the Fund. The SAI contains additional information on the types of additional payments that may be paid.

MANAGEMENT OF THE FUND

Investment Advisor

Donald L. Hagan, LLC, also known as Day Hagan Asset Management, a Florida limited liability company located at 1000 South Tamiami Trail, Sarasota, FL 34236, serves as investment advisor to the Fund. The Advisor was formed in 2004 and, as of March 31, 2022, has approximately \$1.324 billion in assets under advisement or management for individuals, institutions and financial advisors around the country. Under the terms of the management agreement, the Advisor is responsible for formulating the Fund's investment policies, making ongoing investment decisions and directing portfolio transactions.

A discussion of the Trustees' review and approval of the Advisor's investment advisory agreement with the Trust will be available in the Fund's first annual or semi-annual report to shareholders.

Portfolio Managers

Donald Hagan, Arthur Day and Regan Teague are jointly responsible for the day-to-day management of the Fund's portfolio. Mr. Hagan is the Lead Portfolio Manager of the Fund.

Donald Hagan, CFA - *Portfolio Manager of the Fund*

Donald Hagan, CFA, is a managing member and co-founder of the Advisor. Mr. Hagan has served in those roles since September 2004 when the Advisor was registered with the SEC. Mr. Hagan served as the chief compliance officer of the Advisor from September 2004 to December 2012. He is a portfolio manager of DH Logix, LLC ("DH Logix"), a registered investment adviser, since 2017 and was a Partner of DH Logix from 2017 to 2021. Prior to founding the Advisor, from 2001 to 2004, Mr. Hagan was Senior Vice President and Senior Portfolio Manager at Wells Fargo Bank's Private Client Services. Prior to Wells Fargo, Mr. Hagan served as Director of Research and Portfolio Manager for SCI Capital Management from 1996 to 2001. SCI was acquired by Wells Fargo in early 2001. Prior to being recruited as Director of Research for SCI, Mr. Hagan was Chief Sector Analyst and Editor for Ned Davis Research, Inc. From 1989 through 1996, Mr. Hagan also served as editor for the following institutional research periodicals: *Industry Watch*; *Group Update*; *Techno-Fundamental Ranks*; and *Top 30 Picks*. Mr. Hagan has a B.A. in Economics and is a Chartered Financial Analyst.

Arthur Day - *Portfolio Manager of the Fund*

Arthur Day is a managing member and partner of the Advisor. Mr. Day has served in those roles since April 2006. Mr. Day was the senior partner and the manager of the marketing department of DH Logix from 2017 to 2021. Prior to joining the Advisor, from 1993 until 2006, Mr. Day served as a First Vice President at PaineWebber, which was acquired by UBS in 2001. From 1987 until 1993, he was a financial adviser at E.F. Hutton. Mr. Day's investment career began in 1984 as an account executive with Dean Witter Reynolds. Mr. Day has a B.A. in Business.

Regan Teague, CFA – *Portfolio Manager of the Fund*

Regan Teague is a portfolio manager and analyst of the Advisor since graduation from Ashland University (Ohio) in 2012. During his college career, Mr. Teague interned with the Advisor (summer of 2009) and was a member of the Eagle Investment Group – a team of senior finance students that managed part of the college's endowment fund. Mr. Teague received a B.A. from Ashland University. He earned his Chartered Financial Analyst (CFA) designation in 2019 and his Certified Financial Planner (CFP) designation in 2021.

The SAI provides additional information about the portfolio managers' compensation, management of other accounts, and ownership of securities in the Fund.

Fees Paid to Advisor

A discussion of the Trustees' review and approval of the Advisor's investment advisory agreement with the Trust will be available in the Fund's initial annual or semi-annual report to shareholders.

As full compensation for its services to the Fund, the Advisor receives monthly compensation from the Fund at the annual rate of 0.68% of the Fund's average daily net assets. In consideration of the fees paid with respect to the Fund, the Advisor has agreed to pay all routine expenses of the Fund (including, without limitation, transfer agent fees, administrative fees and expenses, custodian fees, legal fees, accounting fees, any other expenses (including clerical expenses) of issue, sale, repurchase or redemption of shares, expenses of registering or qualifying shares for sale, transfer taxes, all expenses of preparing the Trust's registration statement and prospectus for the Fund, and the cost of printing and delivering to shareholders prospectuses and reports), except the Fund's management fee; taxes; brokerage commissions and trading costs; interest expense (including borrowing costs and overdraft charges); short sale dividends and interest expenses; acquired fund fees and expenses; and non-routine or extraordinary expenses of the Fund (such as litigation or reorganizational costs), each of which is paid by the Fund.

DIVIDENDS AND DISTRIBUTIONS

Distributions. The Fund does not offer a dividend reinvestment service to facilitate the reinvestment of distributions into additional Fund shares. The Fund intends to declare and pay dividends on investment income, if any, quarterly. The Fund also intends to make distributions of net capital gains, if any, at least annually. Dividends and capital gains distributions will be paid in cash.

Dividend Reinvestment Services. If you hold Fund shares through a broker that offers a dividend reinvestment service, you may elect to reinvest dividends and capital gains distributed by the Fund in additional shares of that Fund. Contact your broker to determine whether a reinvestment service is available and to discuss any related charges associated with the use of the reinvestment service.

As with all ETFs, reinvestment of dividend and capital gains distributions in additional shares of the Fund will occur after the ex-dividend date (the date when a distribution of dividends or capital gains is deducted from the price of the Fund's shares). The exact number of days depends on your broker. During that time, the amount of your distribution will not be invested in the Fund and therefore will not share in the Fund's income, gains, and losses. A

shareholder will have an adjusted basis in the additional shares of the Fund acquired through a reinvest service equal to the amount of the reinvested distribution and the holding for the new shares shall commence on the day after such shares are credited to the shareholder's account.

TAX CONSEQUENCES

There are many important tax consequences associated with investment in the Fund offered by this Prospectus. The following is a brief summary of certain federal income tax consequences relating to an investment in the Fund. It is not a substitute for personal tax advice. You may also be subject to state and local tax on the Fund's distributions and the sale of Fund shares. Consult your personal tax adviser about the potential tax consequences of your investment in the Fund under all applicable tax laws. For more information, please see the SAI section "Taxes."

Taxation of Distributions. The Fund is treated as a separate entity for Federal tax purposes. The Fund intends to qualify as a "regulated investment company" ("RIC") for U.S. federal income tax purposes. If the Fund qualifies as a RIC, and satisfies certain distribution requirements, it will not be required to pay U.S. federal income taxes on income and gains it distributes to its shareholders.

The Fund intends to distribute substantially all of its net investment income (including net realized capital gains and tax-exempt interest income, if any) to its shareholders at least annually. Generally, distributions are subject to federal income tax for the year in which they are paid. Distributions paid in January but declared by the Fund in October, November or December of the previous year may be taxable to shareholders in the previous year.

Generally, you are required to pay federal income tax on any dividends and other distributions, including capital gains distributions received, that are paid from the Fund's current and accumulated earnings and profits. This applies whether dividends and other distributions are received in cash or as additional shares. Distributions in excess of the Fund's current and accumulated earnings and profits are treated as a tax-free return of capital to the extent of your basis in the Shares and as capital gain thereafter. A written statement will accompany any such distribution informing you that the distribution is a return of capital. If you hold Fund shares in a tax-qualified retirement account, you generally will not be subject to federal taxation on Fund distributions until you begin receiving distributions from your retirement account.

Distributions paid out of the Fund's income and net short-term gains, if any, are taxable as ordinary income or qualified dividend income. Distributions representing long-term capital gains, if any, will be taxable to you as long-term capital gains no matter how long you have held the shares. Distributions are taxable to you even if they are paid from income or gains earned by the Fund before your investment (and thus were included in the price paid).

Individuals, trusts and estates whose income exceeds certain threshold amounts will be subject to a 3.8% Medicare contribution tax on "net investment income." Net investment income includes any ordinary dividends and capital gain distributions from the Fund as well as any capital gains recognized on the sale or exchange of Fund shares.

Distributions of investment income designated by the Fund as derived from "qualified dividend income" (income from taxable domestic corporations and certain qualified corporations) will be taxed at the rate applicable to long-term capital gains, provided holding period and other requirements are met at both the shareholder and Fund level. Long-term capital gain distributions paid to certain high income taxpayers are subject to a regular tax rate of 20%. High income taxpayers, for this purpose, are defined as individuals and married couples filing jointly whose taxable income exceeds \$441,450 and \$496,600, respectively, per year.

Foreign Securities. The Fund may be subject to foreign withholding taxes on income it earns from investing in foreign securities, which may reduce the return on such investments.

Backup Withholding. If you fail to furnish the Fund with your correct and certified Social Security or Taxpayer Identification Number, the Fund may be required to withhold federal income tax (backup withholding) from dividends, capital gain distributions and redemptions. You are urged to read the additional information concerning withholding provided in the SAI.

Non-U.S. Investors. If you are not a citizen or permanent resident of the U.S., the Fund's ordinary income dividends will generally be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies or such income is effectively connected with a U.S. trade or business. The Fund may, under certain circumstances, designate all or a portion of a dividend as an "interest-related dividend" that if received by a nonresident alien or foreign entity generally would be exempt from the 30% U.S. withholding tax, provided that certain other requirements are met. The Fund may also, under certain circumstances, designate all or a portion of a dividend as a "short-term capital gain dividend" which if received by a nonresident alien or foreign entity generally would be exempt from the 30% U.S. withholding tax, unless the foreign person is a nonresident alien individual present in the U.S. for a period or periods aggregating 183 days or more during the taxable year.

Taxes on Exchange-Listed Sales and Cash Redemptions of Creation Units. You will recognize a taxable gain or loss upon the sale of the Fund's shares in the secondary market and upon the cash redemption of the Fund's Creation Unit. Currently, any capital gain or loss realized from the sale of the Fund's shares for cash will generally be treated as long-term capital gain or loss if those shares have been held for more than one year and as short-term capital gain or loss if those shares have been held for one year or less. Any capital loss arising from the sale or disposition of the Fund's shares held for six months or less will be treated as long-term capital loss to the extent of the amount of capital gain dividends received or undistributed capital gain deemed received with respect to the shares. All or a portion of any loss recognized upon the disposition of the Fund's shares may be disallowed under "wash sale" rules if other shares of the Fund are purchased (whether through reinvestment of distributions or otherwise) within 30 days before or after the disposition. If disallowed, the loss will be reflected in an adjustment to the basis of the shares that you acquired.

Taxes on In-Kind Purchases and Redemptions of Creation Units. An Authorized Participant who exchanges securities or securities and cash for a Creation Unit will generally recognize a gain or loss equal to the difference between the market value of the Creation Unit at the time of purchase (plus any cash received by the Authorized Participant as part of the issue) and the exchanger's aggregate basis in the securities surrendered and the amount of any cash paid for the Creation Unit. An Authorized Participant who exchanges a Creation Unit for securities or securities and cash will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Unit (plus any cash paid by the Authorized Participant as part of the redemption) and the aggregate market value of the securities and cash received for the Creation Unit. The Internal Revenue Service, however, may assert that a loss realized upon an exchange of primarily securities for a Creation Unit cannot be deducted currently under the rules governing "wash sales," or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax adviser with respect to whether wash sale rules apply and when a loss might be deductible. Under current federal tax laws, any capital gain or loss realized upon redemption of a Creation Unit is generally treated as long-term capital gain or loss if the shares have been held for more than one year and as short-term capital gain or loss if the shares have been held for one year or less. If you purchase or redeem Creation Units, you will be sent a confirmation statement showing how many Creation Units of the Fund you purchased and sold and at what price.

If the Fund redeems Creation Units in cash, it may recognize more capital gains than it will if it redeems Creation Units in-kind.

PREMIUM/DISCOUNT INFORMATION

The Fund's daily NAV, and information showing the number of days the market price of the Fund's shares was greater (at a premium) and less (at a discount) than the Fund's NAV for the most recently completed calendar year,

and the most recently completed calendar quarters since that year (or the life of the Fund, if shorter), will be available at www.dhfunds.com.

FINANCIAL HIGHLIGHTS

Because the Fund has not yet commenced operations, no financial highlights are available for the Fund at this time. In the future, financial highlights will be presented in this section of the Prospectus.

More information about the Fund is available free, upon request, including the following:

Annual and Semi-Annual Reports

Additional information about the Fund's investments will be available in the Fund's annual and semi-annual reports to shareholders upon issuance. In the Fund's annual report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during its last fiscal year.

Statement of Additional Information (SAI)

The SAI provides more detailed information about the Fund and its policies. A current SAI is on file with the SEC and is incorporated by reference into (considered a legal part of) this Prospectus.

Day Hagan Asset Management is the Advisor to the Fund.

Forside Fund Services, LLC is the Distributor.
